This paper is the result of a joint initiative between UNICEF's Global Policy Section and the Special Unit for South-South Cooperation to increase understanding of the potential of actual impact of migration and remittances on children. The Special Unit for South-South Cooperation was established by the United Nations General Assembly whose primary mandate is to promote, coordinate and support South-South and triangular cooperation on a Global and United Nations system-wide basis. Special thanks to Mr Yiping Zhou, Director of the Special Unit for South-South Cooperation, for launching the research programme with UNICEF and providing the funding for this paper.

The authors would like to thank Dr Nick Alipui (UNICEF Philippines Country Representative) and Mr Colin Davis (Senior Planning Officer, UNICEF Philippines) for adding their experience and support to this working paper. They also would like to thank members of the peer review committee, Mr Wilfredo Nuqui, Ms Jean Liquigan, Ms Roma Atabug, Mr Simeon Coates and Ms Tess Lagarto for their insightful comments and assistance in finalizing this working paper. Rosalía Cortés also provided extremely useful feedback and comments during the drafting and finalisation process.

Increasing the impact of remittances on Children's Rights: Philippines Paper

Executive Summary

This paper uses a human rights based approach to study how remittances could have greater impact on children rights realization and looks at the relationship between migration-remittances and children rights realization for a clearer understanding of the challenges to face to reach greater respect, protection and realization of children rights.

A commonly held belief on migration is that poverty is the main force driving large numbers of people to cross national borders to eke out a better future. The most glaring proof of this contention is that the list of top labor-sending and top remittance-receiving countries is dominated by the developing economies of Latin America, Asia and Africa. Still, there is a global perspective that slices the argument more thinly and contends that “wages apparently need not differ very much to trigger large scale migration” (Hirose, 2004). As the paper will indicate, the Philippine experience on migration issues depart little from these two perspectives.

The data available to link migration with poverty in the Philippines is still sketchy at best. In-depth studies are needed to isolate poverty factors as determinants of migration. On the other hand, in-depth research is also needed in identifying the impact of migration and remittances on poverty alleviation of migrant households, their communities and regions.

However, the statistics on deployment of temporary overseas workers and irregular or undocumented overseas workers (TOW/IOW) and the estimate of stocks of overseas Filipinos and their remittances simply defy this official proclamation by leaps and bounds.

In the midst of this apparently schizophrenic policy environment the current emerging perspective is that this symptom of poor governance and a weak state – migration - is among the solutions to the debilitating problem of poverty.

It appears that a country that uses migration as a strategy to cope with the effects of unemployment without developing the capacity of the local economy to absorb more workers and that does not harness the skills and resources of its returning migrant workers is failing to provide parents with the opportunity and capacity to offer effective protection and care to their children.

As a signatory to the CRC, the Philippine government needs to search for ways to compensate, reduce, limit or overcome the negative effects of migration on the affected children by promoting the use of the remittances for the realization of children’s rights. It must also search for ways to influence migration such that vulnerable groups like children and women are diverted from risky occupations and destinations where very little protection from receiving States are available to them.

Pattern of Philippine migration. It appears that what makes the case of the Philippines particularly interesting is the fact that its migration pattern is characterized by:

- Large percentage of temporary/undocumented workers (62%) compared to permanent emigrants (38%)
- A relatively young migrant population

- Slightly over half of migrants (55%) are married
- Growing feminization of temporary/undocumented workers, many of them deployed in the services industry

The implications of this pattern are:

- the effect of migration on children, especially those of young age, may be higher in the case of Philippines
- the use of remittances for the best interest of children falling into the hands of fathers cannot be considered as obvious because social roles do not prepare men to be effective caregivers of children
- the decision and pattern of expenditures (as proven by studies in other countries) are very different in a male-headed household than in a female-headed household

Remittances and migration. Migration involving the separation on children from their parents and where parents (particularly mothers) are in vulnerable situations and legal status, negatively impacts on children's and women's rights. Separation of children from their parents, particularly from their mothers, is likely to result in emotional and psychological problems. However, existing data is not sufficient to warrant categorical conclusions. There are initial studies that seem to indicate that inherent Philippine social institutions like the extended family mitigate the impact of migration on children.

The Philippine government is challenged to expand its policy and action in protecting migrant workers, particularly children and women. It needs to find ways to articulate a national perspective on migration as it impacts on women and children.

There are significant examples of mechanisms both in the public and in the private sector (including the non-profit sector), that exhibit promising results in terms of mobilizing remittances to advance local development in general and children's rights in particular. However, existing data cannot directly identify conclusive directions. There is a pressing need to fill up the data and knowledge gap on the utilization and impact of remittances – at the family and community levels given the socio-economic environment and pressures of Philippine society.

Migration, remittances and children's rights. The first level of analysis of the impact of migration on children is in terms of negative effects or the so-called social “costs” of migration. While there appears to be massive evidence of economic benefits from migration, the social costs – to the worker and to the recipients of remittances alike, by gender and by age groups – are only beginning to surface in varying degrees in different surrogate indicators.

These surrogates include allegations that migration contribute to increased juvenile delinquency, drug abuse, psycho-social mal-adjustments, loss of self-esteem, early marriages, teen-age pregnancies, and family breakdown among children of TOW/IOW and therefore practically disregarding the realization of the rights of the children of concerned families.

While there are no research documents encountered in the preparation of this paper to support these suspicions in terms of hard field data, it does not also mean they should not be considered seriously.

The paper suggests that research on psycho-social impact of migration particularly TOW/IOW should be part of the agenda of UNICEF in the Philippines. Presently, the available data on psycho-social impact of migration are anecdotal in nature. These include case studies prepared by various NGOs working with migrants and the handbook of the OFW Journalism Consortium.

The second level of analysis of migration and children is in terms of understanding the potential of migration and remittances to mitigate the so-called social costs. It is quite possible that the social impact of migration can be “offset” or mitigated by the way remittances is utilized by the extended family members or care takers.

A 2004 survey indicated that remittances:

- have positive impact on the education and health of children left behind by migrant parents
- children are able to adjust to separation from parents
- members of the extended family provide the necessary care of children left behind by migrant parents

Studies of this scope and focus need to be replicated and expanded to validate its initial findings. Necessarily, caution must be exercised in interpreting responses by children. The intense dynamics between the social, economic and psychological surroundings of children and their own physiological and psychological pressures make up for a complex matrix of variables that make their answers to survey questions difficult to categorically indicate reality. At the very least, these types of studies provide broad parameters of the range of potential effects of migration and its mitigating factors.

While it is easy to assume that remittances positively impacts on children’s education, there are actually no conclusive data to support this assumption. In addition, it is also unknown how remittances or its flipside, migration, contributes to the quality of learning of children given that one or both parents are absent for long periods of time.

The same can be said with respect to the impact of remittances on children’s health and general well-being. It is difficult to say whether the extended family is better or worse in terms of taking care of children’s health.

Again, the Scalabrini study pointed out that children appear to benefit from remittances in terms of opportunity to attend better schools, eat well and have access to health services. There may be a need to further validate its findings in terms of indicating the improvements made available by remittances on the learning quality of children left behind by migrant parents.

Agenda for development. The Philippine government, by improving the status of migrants abroad, could increase the volume and utilization of remittances such that this income flows can be tapped and employed to promote the achievement of children’s rights. This is not limiting the issue to using the existing remittance flows available from a smaller share of relatively better-off permanent emigrants.

In studying the potential of remittances, it is important to consider the status and conditions of the migrant worker. The more secure the condition of the overseas worker is, the better is his/her ability to send remittances for his/her children in a stable, longer-term basis that enables the family to provide for better education, health care, nutrition and general well-being for children left behind.

This also means that tapping remittances to advance the realization of children’s rights involves improving the status of migrant workers while providing efficient and low-cost channels to transfer money and leaving the families the options of allocating remittances. Otherwise, efforts would be concentrated on remittances from relatively “better-off” overseas workers while remittances from relatively more vulnerable migrants will not be able to off-set the effects of separation on one or both parents from his/ her children.

The Philippine government needs to improve the data base of migration – both the migrants themselves and the families affected. It must understand both in macro terms and at the family level the dynamics and impact of migration and remittances in order for State policies to become a more useful tool of advancing children’s rights – the first casualty of migration.

The private sector, NGOs and the Academe all have contributions to make to the efforts of the National Government. As in all other development issues, migration is a call to all sectors concerned. It is not just the State that is challenged to respond.

TOWARDS A GREATER IMPACT OF REMITTANCES ON CHILDREN'S RIGHTS REALIZATION: PHILIPPINES PAPER

1. Introduction

This paper aims at understanding how in the case of the Philippines, remittances could have a greater impact on the realization of children's rights.

In fact, at the global level as well as in the Philippines, migration is too often viewed in a financial and economic perspective by considering the flow of remittances and its contribution to a country GDP. As a result of this biased approach, the social costs of migration on family members left behind and on children in particular are too rarely taken into account while ways to make proper use of remittances have a positive impact on the realization of children rights are almost never explored.

Therefore, this paper intends to use all relevant data and information available for the Philippines¹ to understand, define and precise :

- the trends and pattern of migration (with a gender approach) that actually influences the pattern and flow of remittances
- the psycho-social impact of migration and remittance flows on left behind child(ren) and spouse, taking into the natural resilience of children to adjust to changes and pressures in their environment
- the ways remittances can/ could work towards mitigating the negative impact of migration on children with reference to existing initiatives from social institutions, community organizations or networks
- the relationship between remittances and the promotion and realization of children's rights
- research areas and policy level interventions for further studies and action for greater impact of remittances on children rights

As such, the paper only represents a first step prior to the conduction of more extensive studies focusing on remittances and aims at defining clear areas for research as well as for policy and program interventions that shall help improve the use and effects of remittances for the realization of the rights of the children.

To do so, a human rights based framework of analysis is developed and used to study the issue of remittances and children rights in a broader context wherein remittances are analyzed in relation to the migration pattern and wherein duty bearers and rights holders as well as their respective capacities are considered.

¹This comprises published/unpublished, formal/informal information, indicative observations and anecdotal inferences as conclusions of studies made for other countries

And, at this stage, it is worth mentioning that within such a HR based approach, because migration entails the separation of one or both parents from their child/children, migration cannot be seen as a decision which is in the best interest of children. Therefore, we are of the point of view that remittances can be considered to contribute to the realization (of some) of the children's rights **if and only if** they are used in an appropriate way and **even then**, it is still not proved that it is sufficient enough to compensate the physical, emotional and psycho-social effects of the separation of children from one or two of their parents².

Given the previous, this paper shall therefore try to also identify the circumstances and conditions under which remittances can have a bigger impact for children rights realization looking at the duty bearers' duties and capacities as well as at the right holders claim and capacities. Therefore, the issue this paper addressed is **not just** how to best tap into the present volume of remittances for the realization of children's rights **but also** how to increase the potential of using remittances for the realization of children's rights. This, in a HR based approach, starts by making sure migrant workers, when abroad are not in vulnerable situation that prevents them from being able to fulfill their duties towards the(ir) left behind child/children nor making free and right allocation of the money sent back home.

2. Methodology

The methodology used for this paper mainly consists of a desk review and an analysis of the relation between remittances and children's rights realization using all relevant available data and information in a Human Rights perspective.

The human rights-based framework developed for this study permits us to link the proven or possible effects of the use of remittances to:

- clearly identify duty bearers and rights holders whose capacity gaps are assessed with the aim of identifying interventions to capacitate both of them to respectively and adequately contribute to the realization of children rights
- the general framework offered by the CRC and the conclusions of the Geneva-based CRC committee report on the level of implementation of the CRC in the Philippines to ensure this paper takes into account the country situation
- particular categories of children's rights so that clear policy orientations and programmatic axis on the social, political and economic fronts may be drawn
- the child's life cycle and the age related rights so that programmatic orientations adapted to the child age can be drawn

This framework finally help us recognize that the social impact of remittances on Children's Rights cannot be fairly discussed without considering it in the broader context of migration because remittances are only one of the by-products of migration and migration has an impact on the migrant capacity when a parent, to act as a duty bearer towards his/her child(ren).

² All those emotional and psycho-social effects seemed actually not to have been studied in a systematic way on a large enough sample of children.

Finally, before we go further, it is worth clarifying a few terms used in this study. While at this stage of the work³ we have not tried to restrict the use the remittances term, we have felt necessary to precise a bit more the definition of Overseas Filipinos.

2.1. An evolving definition of Overseas Filipinos

Over the past three decades, the term for Filipinos living and working abroad has evolved to reflect the changing political sensitivities about them. During the 70s and 80s, they were referred to as Overseas Contract Workers (OCW). This term underlines the fact that most of them were contractual laborers during the construction boom of the Middle East. During the 1990s, the Philippine government hailed them as the new heroes and begun calling them Overseas Filipino Workers (OFW). Among NGOs, the predominant term used is “migrants” or “migrant workers”. However, this paper will adopt a simple nomenclature for overseas Filipinos, one that is more generic and reflective of the different status of overseas Filipinos.

Box 1 : Some useful definitions

- **Overseas Filipinos (OF)** – refers to all Filipinos living and working abroad and includes temporary overseas workers (TOWS), permanent immigrants (PI) and irregular/undocumented overseas workers (IOWS)
- **Temporary Overseas Workers (TCWS)** – refers to contractual workers, both land-based (majority of whom are in the Middle East and Industrializing Asian countries) and sea-based (seafarers)
- **Irregular or Undocumented Overseas Workers (IOWS)** – these include the so-called *TNT (tago ng tago)* or illegal aliens in the US, workers who obtained fake travel documents (to gain illegal entry or due to being under-aged), and over-staying tourists abroad who are working illegally
- **Permanent Emigrants** – refer to Filipinos who have migrated abroad either singly or with their families

3. The Pattern of Migration in the Philippines⁴

3.1. Philippine migration within the global context

A common belief about migration is that poverty is the main force driving large numbers of people to cross national borders to seek out a better future. The most glaring proof of this perception is that the list of top labor-sending and top remittance-receiving countries is dominated by the developing economies of Latin America, Asia and Africa. There is however

³ The original TORs of that study were more those of a quick desk review of existing documents and data .

⁴ Tables graphs and figures mentioned in the text are found in Annex B

another perspective that slices the argument more thinly and contends that “wages apparently need not differ very much to trigger large scale migration” (Hirose, 2004). As the following discussions will indicate, the Philippine experience with migration issues depart little from either of these two perspectives.

3.2. Migration and structural issues

Migration is a sensitive issue for the Philippine government because of the prevailing perception within the media establishment, researchers and political analysts that poverty is the main driver of emigration. It is argued that the incapacity of the government to address the widespread problems of poverty forces it, albeit grudgingly, to tolerate the deployment of Filipino workers overseas even if it means they work in risky jobs and destinations. In fact this position is to some extent buttressed by the idea that a State like the Philippines, where public institutions are ill-equipped to provide mitigating measures, is practically helpless in the face of globalization’s pressure on labor and that migration is merely symptomatic of the deficiencies in governance and resource management in the country.

The data available to link migration with poverty in the Philippines is still sketchy at best (Go 2002, Tan 2001, Opiniano 2004, Bagasao 2004). While in-depth studies are needed in order to isolate poverty factors as determinants of migration, in-depth research is also needed in order to identify the impact of migration and remittances on poverty alleviation of migrant households, their communities and regions.

3.3. The need for coherence between policy and reality

What is common in the literature is the view that the Philippine government has no coherent policy on migration (O’Neal 2004, Opiniano 2004, Ofreneo & Samonte 2001). Section 2 (c) of Republic Act 8042, otherwise known as the Migrant Workers Law, states that:

*...the State **does not promote** overseas employment as a means to sustain economic growth and achieve national development . . . The State, therefore, shall continuously create local employment opportunities and promote equitable distribution of wealth and benefits of development. . .*

However, the statistics on deployment of Temporary Overseas Workers/ Irregular or Undocumented Overseas Workers and the estimated number of overseas Filipinos and their remittances simply contradict this official proclamation dramatically. In fact, a ‘business sector’ revolving around migration has emerged (some tertiary schools and even IT and technical schools have begun offering nursing and care-giving courses targeted at US and Japanese markets, companies offer to process migration request and visas, etc.).

In the midst of this confusing policy environment, the current emerging perspective is that this indirect consequence of poor governance and a weak state – migration - is among the solutions to the debilitating problem of poverty. The irony is in proposing to use what appears to be a headache to cure a burning fever. Therefore, it appears that a country that uses migration as a strategy to cope with the unemployment issue while achieving little success in developing the local economies’ capacity to absorb more workers, and that does not harness the skills and

resources of its returning migrant workers, is failing to provide parents, the opportunity and capacity to offer effective protection and care to their children.

That is why, as a signatory to the CRC, the Philippine government must search for ways to influence migration such that vulnerable groups like children have their rights protected and respected. It is also essential for the government to ensure that migrants are protected from entering risky occupations and from going to destinations where very little protection from receiving States is available to them. The government must also find out ways to compensate, reduce, limit or overcome the negative effects of migration on the left behind children by promoting the use of the remittances for the realization of the unfulfilled rights of the children left behind.

3.4. Estimated number of Overseas Filipinos

Extracting data from the 2000 Census on Population and Housing, we can say there were roughly 1.45M Filipino mothers and 1.2M fathers living and working away from about 2.65M Filipino families during that census year. They represent more than one-sixth of the total number of households for that census year. At an average family size of three children by family, nearly eight (8) million children are left behind. The actual figures may be lower since there are cases where both father and mother work abroad but this reduction does not improve the overall picture. Actually, there are few reasons to believe that the situation has improved⁵. The deployment of Filipino migrants is growing every year and is now at the rate of about 2,400 daily. More than half (56%) of those departing are married. **Table 3** shows the estimated number of Filipinos overseas by the end of 2001. **Figure 1** shows the graphical distribution of overseas Filipinos in 1997 and the picture can be considered valid up till today.

Permanent Emigrants

Among the top five destinations of Filipinos permanently moving overseas are the US, Canada, Australia and Japan (CFO). **Table 1** shows the profile of Filipino emigrants by major occupational group covering the period 1981-2003. Nearly three out of ten (29.47%) emigrants during the period covered indicated that they were employed at the time of departures. More than half of the total was accounted for by Students, Housewives and Minors (53.5%).

More than half (54.13%) of these emigrants left the country when they were less than 30 years old, and three out of ten were less than 20 years old. Slightly over a tenth (11.3%) of the emigrants left when they were 60 years and older.

Temporary Overseas Workers (TOWs)

The term temporary is used primarily to contrast them with the permanent emigrants. This is important to point out because even though most of the workers under this category are actually the so-called contract workers or OCWs, many of them work overseas for long periods. It is not unusual to meet TOWs who have been working in the Middle East for fifteen to 20 years.

⁵ see article sourced from Agence France Presse on 22/01/01 “1M Filipinos Join Diaspora” indicating that according to Philippine Overseas Employment Administration, there were over 8 million Filipino’s working overseas during 2006 with their remittances for the 11mths till November totaling US\$11.44 billion

Of the estimated total of 8.8 million Overseas Filipinos shown in **Table 6**, about 62% are temporary (TCWs) or irregular overseas workers (IOWs). In absolute terms, this is equivalent to about 5.46 million Filipinos, or 6.4% of the estimated 2005 Philippine population.

Three out of five migrants have temporary or irregular work status and their insurance package from the Overseas Workers Welfare Administration (OWWA) is largely inadequate to allow their family to survive if they were to suffer an accident, hospitalization or death.

Irregular or Undocumented Workers (IOW)

Table 3 shows that there were about 1.6 million IOWs as of December 2001 - this represents more than a fifth (21%) of the total land-based workers. In terms of distribution, the ratio of IOWs versus TOWs are about three times that in Americas & Trust Territories, nearly half in Europe, East and South Asia and in Oceania. IOWs are only about a tenth of TOWs in West Asia and less than a third in Africa.

Estimating the number of TOWs/IOWs aged 20 and below, abroad

Extracting data from the 2000 Census on Population reveals an interesting element of the migration pattern. There were about 167,870 Filipinos below age 20 who were working overseas during that census year, with 65.45% of them being females. The 2002 NSO survey on migrants, which ended up with different figures but showed the same pattern, indicates that in 2002 there were about 8,000 overseas Filipino workers aged 15 to 19 year old, three-fourths of them being females (see **Table 7**) and that the total number for the 20-24 age-group is 114,000, with 69.3% of them being female.

3.5. Estimating the number of children left behind by migrant parents

With an average family size of three (3) children (NSO), the number of children of migrant mothers left behind would be about 1.5 million. **Figure 2** indicates that 28.4% of migrant workers are male heads of household. Applying this ratio with the estimated total TOWs/IOWs of 4.4 million (**Table 3**), we have an indicative figure of 1.25 million fathers. Again using the average family size of three (3) children, we have about 3.75 million children left behind by their fathers. These yield a total of 5.25 million children left behind by migrant mothers and fathers. A draft study on children of migrants in three Asian countries indicates an estimate of 3-6 million children left behind by migrant workers.

3.6. Special gender consideration in the pattern of Migration

Recent migration data from various sources indicate that nearly 1.4M families have mothers working abroad and about 1.2M more have absent fathers. This means that about 15% of total families have children growing up without either a father or a mother to ensure care, guidance and protection. The ILO reports that from 1992-2002, the share of women in annual deployment of land-based overseas workers by the Philippines grew steadily from 50% to more than 70%. This is accounted for by increased deployment in Services and Production jobs. Women also account for three-quarters of deployments in Professional/Technical type of work. If this is not a surprising phenomenon in a country where the male-female ratio of students from primary to tertiary levels is about equal, the feminization of Filipino migrants poses a different perspective to the migration issue.

The growing number of mothers leaving their husbands and children behind creates cultural and social pressures:

At the family level

- fathers, who are not traditionally geared for being house-bound, have to suddenly take over the role previously held by the wife and mother. While it is true that extended families provide substantial physical, moral and emotional support, the fact remains that for before family members are able to settle under this new arrangement, children and fathers live for a while in a disrupted family and are likely to be emotionally tense.
- young children and teen-age girls faced increased risks as fathers may not be able to provide adequate care for infants, pre-schoolers and adolescents, particularly girls the way a mother would do. And even if in a number of cases, the role of the mother is taken over by grandmothers, aunts and older sisters. This may actually mean for the children an additional separation from the father this time.

At the societal level

- the growing feminization of migrant workers in the Philippine context is a phenomenon that implies a redefinition of the economic role of women in the society and within their family as well as a redefinition of the traditional Filipino family.
- it is less and less unusual to hear anecdotes or read more formal reports mentioning the psycho-social effects of migration on teenage children of OFWs, stress on families and marriages after the spouse migrates, infidelity and separation of couples, cases of children born out of wedlock in the Philippines or abroad⁶.
- the feminization of the migration may result in or be associated with an increased vulnerability of women migrants to abuse and exploitation as well as sale and trafficking of women.
- the stereotyping of Filipinas working abroad as “domestic helpers” in Hong Kong, Singapore and Italy and as entertainers (“*japayuki*”) in Japan has become a concern among NGOs and social commentators. However, as more educated women (nurses, etc.) join the ranks of migrant Filipinos, this perception may change.

In conclusion, it appears that what makes the case of the Philippines particularly interesting is the fact that its migration pattern is characterized by the following:

- A large percentage of temporary/undocumented workers (62%) compared to permanent emigrants (38%)
- A young migrant population
- A high percentage of migrants being married
- A growing feminization of temporary/undocumented workers, many of them deployed in the services industry

This migration pattern has implications for all levels of society; it disrupt the way families, and communities are traditionally organized which particularly impacts on the provision of care to its children for their survival and development.

⁶ This often n but not exclusively refers to children born out of wedlock from Filipina entertainers working in Japan.

Given the previous and from a HR perspective, it is thus imperative to take a closer look at the following issues which are particularly relevant for the Philippines:

- the problems created by migration for the proper realization of children's rights need to be overcome, reduced or solved. The adequate use of remittances may contribute to this but cannot be considered as sufficient for that :

- the effect of migration on children who are left behind – this is especially important to consider for the younger ones and the females in particular, who are separated from their mothers, and therefore may become exposed to a physically, socially and emotionally stressing or riskier environment
- The effect of the growing feminization of migrant workers on the status of women in work sites abroad (type of contracts, etc) – consideration must be given to their vulnerability (prostitution, sale and trafficking) and thus their ability to act as primary duty bearers responsible for the promotion and realisation of their children's rights.

- the ability to use remittances to ensure the realization of children's rights:

- given that the process of decision-making and pattern of expenditures in male-headed households is different from that of female-headed households
- given that the responsibility of using remittances in the best interest of the children falls into the hands of fathers, who may not be well- prepared to become the primary and single caregiver in light of the traditional male and female roles.

4. Remittances: Mitigating the negative impact of migration

In our HR based perspective, discussing migration, remittances and children's rights in the search for greater impact of remittances on child rights realization, two basic facts need to be taken into consideration :

- parents who migrate leave behind their child(ren) to earn a living overseas take a decision that **can not** be considered to be in the best interest of their child for the simple reason that left behind children are deprived of their right to grow up with both their parents providing them with care, affection and protection
- in addition to that, the lack of physical parental presence, care and guidance resulting from the migration of one or both parents, **can not** be substituted with remittances and other material substitutes (gifts, pasalubong, etc.)

With this basic elements as fundamentals to our analysis, it is clear that remittances if used properly must **first** contribute to mitigate the negative effects of migration⁷ **before** they can be said contributing to children rights realization⁸.

⁷ These are the often under-estimated and not enough studied social costs of migration that result in psycho social and emotional additional stress on the children psychology and well being as well as in psychological and emotional stress for the parent(s) leaving their child(ren) behind.)

It is therefore important to analyze in this section what is at present the remittances volume and pattern as well as how it is channeled and used.

4.1. Volume of remittances and their importance in the Philippine economy

Remittances by overseas Filipinos through the formal channels reached US\$11.44B level for the 11 months till November 2006⁹. This is equivalent to 10% of GDP for the same year. This is more than the combined GDP contribution of Mining & Quarrying, Construction and Electricity, Gas & Water, and accounts for more than 65% of the GDP contribution of Agriculture, Fishery and Forestry. Experts believe that the actual total remittances could easily double if funds sent through the informal channels are added¹⁰. In addition to that, it is worth noting that during the two-year period 1999-2001, remittances accounted for 20.6% of exports and 6.2% of GNP¹¹.

With remittances accounting for nearly 10% of GDP in the Philippines, the dependence of the economy on these remittances is high. The advantage of this figure for the economy is the possibility of relying on Filipino overseas workers to stabilize its exchange rate, manage the Balance of Payments and spur up consumption.¹² Opiniano (2004), citing Tenorio (2002), indicated that remittances are one of the three reasons why the Philippines survived the 1997 Asian financial crisis. In fact, as exports declined from 1997 to 2001 in the aftermath of the Asian financial crisis, the Philippine economy was kept above the water by a stable flow of remittances from nearly nine million overseas workers scattered in 192 countries.

The sheer magnitude of remittances sent home by nearly 8M overseas Filipinos, with money sent through formal channels nearing the US\$9B mark this year, significantly impacts the country's Balance of Payments and its foreign exchange generation.

As already mentioned, this fact has placed the Philippine government in a conflicting position, where it tacitly promotes overseas employment while remains unable to declare an official migration policy. This apparent contradiction extends into an ineffective policy environment where mitigating the impact of migration on children and women and influencing the way remittances are used so as to realize its obligations to the CRC as a signatory government are obligations left unfulfilled.

⁸ The idea here is that if remittances contribute to children right realization it means they must first of all mitigate the negative effects of migration and then offer new opportunities for children rights to be respected, protected and realized

4.2. Distributive impacts at macro and micro level

The 5.46M temporary and irregular overseas Filipino workers send remittances affecting at least 23M individuals or about one-fourth of the country's population¹³. Seafarers alone account for a quarter of a million families receiving nearly US\$1.5B annually.¹⁴ In the Philippines, de Vera's paper (2003) using data from the Family Income and Expenditure Survey, indicated that 55% of migrant workers come from the two lowest income brackets, those earning less than US\$267 per month while 15% of migrant workers come from households in the lowest income bracket of US\$ 100 per month. An ADB Paper in 2004 revealed that 80% of migrants, predominantly temporary (or contract workers) and irregular workers, remit to their families on a monthly basis with the normal amount of remittance of US\$150-500 for 65% of respondents.

General patterns of use

In the Philippines, 36% of remittances of a household are used to repay debts incurred by the costs associated with the TOWs/IOW's applying for work abroad (see Table 8). Household expenditures account for 32% and when added together with Appliances/Furniture (13%), account for nearly half. Only 10% has gone to the Education of children, with Savings and Investments accounting for 9%¹⁵ (Bagasao, 2003).

The only change in Philippine figures over the past two decades¹⁶ is that the absolute numbers have become staggering. According to the 2000 National Family Income and Expenditure Survey, TOWs/IOWs migrants and their families spent Php13.6B¹⁷ on durables like appliances and furniture¹⁸.

Table 9 shows the Philippine pattern of utilization of remittances as compared to other studies for other countries with high levels of remittances. However, in the context of the Philippines, it is important to note that :

- since Filipino TOWs/IOWs mostly come from the relatively poorer households, they will have to use a substantial portion of their remittances to pay back family members and others who lent them the money they used to get their jobs abroad. In fact, it appears that prior and immediately after migration, they have negative net assets. This negative balance sheet is exacerbated by the huge expenses one incurs in preparing for work abroad. The cost to go and work abroad is quite high, with different official fees totaling about Php7,155¹⁹. As an example, in the municipality of Mabini in the Province of Batangas (about 3 hours south of Manila), three generations of overseas workers have been shelling out large sums to procure illegal travel documents to Italy (OFW Journalism Consortium, 2004). The starting amount for these documents is Php250,000 (about US 4,500) and often goes higher. Although the costs are quite high, the continuous flow of

¹⁸ For comparison, this figure is two and half times the annual export earnings of the country's entire coconut industry.

¹⁹ Equivalent to US\$128 at usd 56 for php 1 exchange rate

migrants from that municipality has reinforced the conclusion of the locals that it apparently makes economic sense to borrow money to go and work abroad

- the pattern of use of remittances also depends on the income level of the migrant.

Remittances use pattern reflective of income level of migrant worker

Raw as the data may seem, these figures on remittance utilization are perhaps reflective of the fact that 86.4% of overseas Filipinos come from the bottom income brackets, with 55% coming from the two lowest brackets.²⁰ At close to subsistence economic levels, households of non-emigrants are expected to utilize most of remittances for consumption and household amenities.

In addition to that, there is a temptation to promote the view that perhaps households should just be left alone to decide how to use remittances. As Bagasao (2005) recently pointed out, "remittances are inherently private transfers, that is, remitters have the proprietary and moral right to spend them in whatever and however way they want." Despite this view, there remains a need to better establish the relationship link between the migrant status abroad, the remittances and the capacity to use them to contribute to the realization of children's rights.

Household decision making on use of remittances

Figure 2 indicates that 27.8% of non-emigrant overseas workers are a female child of the head of household. In this situation, leadership in the family affairs may shift significantly. The role of provider that is normally played by the parents, particularly the father, is now taken over by a younger and female breadwinner. An interesting example of this shift is the case of female entertainers, usually young girls who can earn substantial amounts of money for the five to twelve years that they are qualified to work as entertainers, and who when they have the power to decide how and where to spend their savings, will buy appliances and trinkets.

Case of diaspora giving

From 1990-2002, the Philippine Commission on Filipinos Overseas (CFO) reported having raised a total of Php1.187B²¹ in donations to its LINKAPIL (Lingkod sa Kapwa Pilipino or Service to Countrymen) program from Filipinos abroad. **Table 10** shows that a little over 80% of this amount came from the United States. Other significant donations came from Germany (4.88%), Canada (4.35%), Australia (3.35%) and Japan (2.54%). This profile is closely linked to the profile of Filipino emigrants shown in **Table 1**. **Table 11** moreover shows that more than half (58%) of these funds went to Health Related and Medical Missions, nearly a quarter (24%) to Relief and Calamity, 15% to Education and Scholarships, 2% to Livelihood and 1% Infrastructure.²²

Community-based association and remittances

There are also case studies of certain local communities in the Philippines benefiting substantially from donations from its population working overseas. In the towns of Pozzorubio,

²⁰ Opiniano (2004), citing Roberto de Vera (2003)

²¹ latest unverified figures indicate this to total about Php1.3B by 2005

²² Bagasao, Ildefonso, Jr., MIT Conference on Public Policy, Migration and Development, Boston, October 2003

Pangasinan (about 4 hours north of Manila), local officials attribute significant local development to the remittances coming from an estimated 10% of its population living and working abroad. The benefits include public infrastructure, investments in business enterprises and improved housing units. Local officials have made fundraising trips abroad to expand a growing trend of diaspora giving. San Pablo City in the province of Laguna is another example of a local community benefiting from donations of overseas Filipinos.

There is also a wide proliferation of hometown associations of Filipinos abroad. In addition to the type of projects by LINKAPIL that these groups have been supporting, hometown associations and individual givers are also significant donors to town fiesta celebrations. These festive occasions that are mostly held on the dry season (March to May) are normally the time when overseas Filipinos demonstrate the material benefits that migration has brought them and their families. As they join various homecoming events, they interact with those neighbors and friends left behind with both horrifying and inspiring stories of life and work abroad.

The social acceptance that people witness from visiting and even returning migrants, the large amounts of donations these migrants make to various causes, the lavish parties, the expensive clothes, the latest electronics and appliances – all of this encourages others to aspire to join the migration bandwagon.

Use of remittances and asset formation

It appears that while there are criticisms that Filipino TOWS/IOWS “waste” their money on consumption and therefore do not make productive use of their remittance, i.e. use it to help the realization of basic children’s rights such as education and health, it is important to note that some of the so-called consumption expenditures are actually income transfers to members of the extended family who take care of the spouse and children of the migrant worker left behind. This practice nurtures the socio-cultural safety net that is essential to the migrant particularly because the unstable and risky nature of work abroad increases the need to rely on the extended family to take care of family left behind.

On the other hand, this expenditure pattern tends to create impressions among neighbors within the community that migration is a much more desirable option than waiting for the country’s economy to prosper. Thus, the visible acquisition of material goods continuously encourages the individual decision-making of potential migrants to emulate their new economic role models.

In some respects, this seems to be contrary to the evidence drawn from other countries where it is more apparent (Table 9) than implicit in the expenditure patterns of migrant households in other countries is asset formation. These assets can be physical, i.e. farmlands, residential lots or houses or durables, i.e. investments in human capital through the health and education of their children. These assets may also be investment in the so-called “Social Capital”. As income stream improves, a migrant worker helps not only his direct households, but also his extended family, other relatives, friends and neighbors. Reciprocity is then expected from this generosity.

A potential largely untapped ?

In the experience of the Economic Resource Center for Overseas Filipinos (ERCOF), a number of Filipino associations in Europe have indicated their willingness to invest and donate more to

local communities, and not necessarily just to their own communities. They have however raised their concern though that the local absorption capacity needs to be strengthened to ensure that funds are managed well.

The recent effort of the Ayala Foundation to register a 401 (k) entity in the US to help raise charity funds for the Philippines is another opportunity that can be tapped by UNICEF. Under this scheme, U.S. corporations and nationals can give tax-deductible donations that can finance programs in the Philippines

Box 2 : *The challenge of teaching families to use remittances to fish*

The challenge of teaching families to use remittances to fish

Bagasao (2005) pointed out that another view one can take with regarding the utilization of remittances is to ask whether the families have another option whereby they put the money allocated for consumption into a productive mechanism, and this mechanism in turn generates the income stream that can support the family's daily needs even the beyond remittances they receive.

This view deserves serious consideration as discussions on the link between migration and development advance. Presently, the focus of multilaterals and government central bankers is on keeping track of remittances for taxation, foreign exchange and anti-money laundering purposes. Among migrants however, this agenda may appear offensive, with well-paid executives being pictured as dipping their "fat hands" into the cookie jar of hapless migrant workers.

In conclusion, various studies have shown that:

- **remittances sent through formal channels reached US\$8.55B level at the end of 2004 (BSP) which is equivalent to 9.9% of GDP for the same year (computed at Php:US\$ exchange rate of 56)**
- **for 65% of respondents, the amount of remittance is between US\$ 150 and US\$ 500/month**
- **the use of remittances depends on the origin of the OFW and, 36% of remittances of a household are used to repay debts incurred by TOWs/IOWs application for work abroad because in 86.4% of the cases, OFWs come from the bottom income brackets, with 55% coming from the two lowest brackets.**
- **A large part of the remittances are spent on consumption**

However, it is important to note that despite the already important contribution of remittances to the economy, it is accepted that there is no clearly defined migration policy in the Philippines,

nor policies to orientate the use of remittances for asset formation or the realization of children's rights.

As a result of this, an increasing share of OFWs are women, most of them mothers, and they are leaving the Philippines to take up jobs which sometimes put them in vulnerable situations. It is therefore difficult to imagine that remittances coming from OFWs in illegal or vulnerable situations could quickly contribute to the realization of their children's rights and given the social origin of the migrant, the first income shall first be used to pay back the debts incurred at the migration time.

It is also time to consider the social, family and individual dimensions of this growing migration phenomenon because of the indivisibility of Human rights as well as the fact that in the case of children rights, they can be enjoyed by children only if provided by the State and its administration as well as those adults (parents, primary care takers, etc.) who bear duties towards children fulfill their obligations. It is only under these circumstances that it will be possible to consider the use of remittances for the realization of children's rights.

5. Effects of migration and use of remittances on children's rights realization

There are a number of costs at the individual, family and society levels that are revealed when one looks at the social dimension of migration. Even though no study can presently highlight the level, frequency, and intensity of these costs, it remains a basic truth that the human costs of migration have to be taken into account when speaking of using remittances for the realization of children's rights.

5.1. Social costs of migration

While there appears to be massive evidence of economic benefits from migration, the social costs – both to the worker, to the recipients of remittances, by gender and by age groups and the child(ren) left behind – are only beginning to surface, in varying degrees and via different surrogate indicators. These surrogates include allegations that migration contributes to increased juvenile delinquency, drug abuse, psycho-social mal-adjustments, the loss of self-esteem, early marriages, teen-age pregnancies, and family breakdown among children of OFWs - therefore practically disregarding the realization of the rights of the children of concerned families. Although no documentation to support these suspicions could be found, this does not mean they should not be considered seriously through the conduction of focused studies.

5.2. Psycho-social impact of migration

Research on the psycho-social impact of migration particularly on TOWS/IOWS and their left behind family members should be done because at present, the only available data on psycho-social impact of migration is anecdotal in nature. These include case studies prepared by various NGOs working with migrants and the handbook of the OFW Journalism Consortium.

5.3. Benefits of the remittances and children’s rights

It may be easy to assume that remittances positively impact children’s education but there is actually no conclusive data or definite findings to support this assumption. “Hearts Apart: Migration in the Eyes of Filipino Children”, a study prepared by the Scalabrini Migration Center in 2004 involved a survey of 1,443 children between ages 10-12. The study indicated that remittances:

- have positive impact on the education and health of children left behind by migrant parents
- children are able to adjust to separation from parents
- members of the extended family provide the necessary care of children left behind by migrant parents

However, studies of this scope and focus need to be replicated and expanded to validate those findings. In addition, caution must be exercised in interpreting responses by children. At the very least, these types of studies provide broad parameters of the range of potential effects of migration and its mitigating factors.

In addition to the previous, it is also unknown how remittances contributes to the learning capacity of children. The same can be said with respect to the impact of remittances on children’s health and general well-being. As long as no formal study is made, it is difficult to know whether the extended family is better or worse in terms of taking care of a child’s health. Again, the Scalabrini study pointed out that children appear to benefit from remittances in terms of opportunity to attend better schools, eat well and have access to health services. However, there may be again a need to further validate those findings in terms of indicating in more detail the improvements made to the learning quality of children left behind by migrant parents, as a result of the remittances sent.

Analyzing the impact of migration and remittances on children’s rights through a HR perspective

Annex A presents the results of our analysis of migration and remittances effects on children’s rights. Using a human rights-based approach and referring to the CRC, these matrices help to define for each type of right and by age group, the effects of migration on children and the issues to be addressed by remittances while assessing capacity gaps of duty bearers.

In addition to the detailed analysis offered in Annex A, these matrices allow us to reach the conclusion that in the case of the Philippines, in order for remittances to contribute to the realization of children’s rights, the following axis of intervention must be considered (see matrix below).

Interventions required for greater impact of remittances on childrens rights realization

Migration effects	Remittances and children’s rights	Axis for the required interventions
Increased vulnerability of overseas worker particularly that of	increased risk for parents to not be in a position to provide protection	<i>Axis 1 : to enable overseas workers to fulfill their duties as</i>

undocumented/illegal overseas workers	and care to their children	<i>parents</i> To ensure and maintain the capacity of the overseas workers
Negative emotional, physical and psycho-social effects on children, particularly true in the case of the Philippines where there is a strong gender bias in the migration dynamics	Need for remittances to overcome those effects in addition to the realization of children's rights	<i>Axis 2 : to assess the psycho-social costs to be overcome by remittances and offer an adequate response</i> <i>To understand the intensity of the negative emotional, physical and psycho-social effects on children</i> <i>To define appropriate package of service to address these findings</i>
Increase of income of the overseas worker with direct economic effects on the family	Uncertain / no systematic effect of the increased economic power on the realization of children's rights	<i>Axis 3 :</i> <i>To facilitate the flow of remittances</i> <i>To channel the flow</i> <i>To refine the pattern of use of remittances</i>

In a more detailed way, this means:

- Axis I – Capacity of overseas workers to fulfill their duties as parents

A tentative analysis of the relationship between the status of the OFWs, the remittance flow, quantity and its pattern of use is provided in the following table

Status of Migrant	Definition	Typical Remittances Flow	Predominant Remittances Utilization Pattern	Indicative Effects on the parent capacity to fulfill his/her duty
Temporary Overseas Workers (TOWS)	Refers to contractual workers, both land-based (majority of whom are in the Middle East and Industrializing Asian countries) and sea-based (seafarers)	Tends to be regular, mostly on a monthly basis	Basic needs, but able to provide for better education, health care and nutrition Allows for relatively defined planning horizon, normally two years	Parents are able to provide money for education, nutrition and health needs; able to communicate with children on a more regular basis, have access to formal remittance channels

Irregular or Undocumented Overseas Workers (IOWS)	these include the so-called <i>TNT (tago ng tago)</i> or illegal aliens in the US, workers who obtained fake travel documents (to gain illegal entry or due to being under-aged), and over-staying tourists abroad who are working illegally	Tends to be irregular Vulnerable to sudden stoppage because of the legal status of migrant	Focused on basic needs Substantial part may go to paying debts incurred to work abroad Does not provide for long-term expenditure nor investment planning	Migrant workers undergo stress and difficulties at work place, are vulnerable to abuse, may likely encounter difficulties in sending remittances. As such, largely unable to in fulfill duties and obligations to provide and care for children.
Permanent Emigrants	refer to Filipinos who have migrated abroad either singly or with their families	Stable and dependable Relatively higher amounts	Relatively able to plan long-term; may likely involve savings and investments Children's needs are provided for in both quality and quantity	If children are with parents, children's rights are realized in country of destination If children are left behind, stable and dependable remittance flows are able to provide for better education, nutrition and health care for children

This analysis would suggest that in order for remittances have a maximum effect on the realization of children's rights, the status of the migrant must be improved so that they can avoid being in vulnerable situations abroad which would negatively affect their ability to provide care for their children. Example of this care could be either the sending of remittances or going back home every for visits to the Philippines.

Offering increased protection to a larger number of migrants should normally not only put them in a better position to fulfill their duties as a parent by allowing the allocation of some remittance money to be used for their children's rights, but also should lead to both a change in the pattern

of these remittances (regularity of the flow, amount, etc) and an increase in the total volume of these remittances.

- Axis 2: To assess the psycho-social costs which need to be overcome by remittances and offer an adequate response

As initiated by the matrices of the annex A, it is possible to map out the possible effects of remittances on particular types of children's rights as well as for a particular age group of children. This would result in a definition of the package of services to be delivered to each group of concerned children in relation to their situation and age.

Moreover, using a human rights based framework of analysis, it is then possible to identify the stakeholders and in particular, the duty bearers who need to be capacitated so as to be able to fulfill their duties towards children. This analysis will lead to the definition of various types of support and assistance to be provided to duty bearers, support which would ultimately benefit the right holders, the children of OFW.

- Axis 3 : To facilitate the flow of remittances, to channel it adequately and to refine the pattern of use

The analysis suggests that migrants should be enabled to be left with the maximum income after they have covered their own needs and expenditures, paid back the money borrowed at the time of migration, paid taxes, etc.

It also suggests that in addition to being properly channeled towards expenditures favoring the realization of children's rights, the flow of remittances should be made more regular, and less fluctuating. This stability would allow the migrant to then plan and decide within the framework of an increased number of options of expenditures, which would include expenditures favoring the realization of children's rights.

Box 3: Knowledge gap and data needs

Knowledge gap and data needs

The main issue when it comes to analyzing the use of remittances is the lack of in-depth field studies. There is a need to understand whether there is any difference in the spending patterns of TOWS/IOWS households based on details such as: varying levels of educational of the overseas worker, whether households of workers come from the urban versus those coming from the rural areas, and the difference between households where the wife is abroad, where the husband is abroad or those where both spouses are abroad.

Consumption as an expenditure item needs to be defined and analyzed. Is there a significant improvement in the diet of children and other household members among households with members working abroad when compared to those who do not? What is

the extent to which remittances are utilized for durables meant to “boast” as compared to those meant to enhance quality of life (branded VCRs versus personal computers for children)? These are some of the questions surveys need to answer.

There is also a need to understand the impact of remittances on the income-generation activities of the household members left behind. Does the wife continue to engage in business or continue to be employed? How about the husband? Does the spouse left behind invest a portion of the remittances in business enterprise, to what extent, and what are the driving factors? How do investment decisions and patterns differ according to the educational level of the overseas worker and other household members or according to the income level of the household? Do investment decisions vary depending on the type of job taken by the overseas worker? Do they differ between married and single workers?

How significant is debt payment as a share of expenditures from remittances? What are the major uses of debt with respect to working overseas? Does it vary according to educational level, household income level, urban or rural, by age group? How is debt incurred?

As with remittances, the trend of Diaspora giving needs to be analyzed if it is to be of value to the development of Filipino families and communities. What comprises donations for Health Services and Medical Missions? Do these donations help build the capacity of communities or do they in fact develop dependency behavior among beneficiaries, while the donors merely end up feeling good about giving?

Are scholarships funded by donations from overseas workers managed individually or institutionally? Do scholars “give” something in return like service to the community after graduation? How are scholars chosen? Are there counterparts from the beneficiary’s family?

While the present data available indicate that permanent migrants, mostly from the US are the largest sources of donations, the sheer number of TOWS/IOWS is a factor that should be considered in planning for resource mobilization. Migrant workers understand the needs of their families and communities better than anyone else. It is highly probable that they would be as willing, if not as capable as permanent emigrants to contribute to local development.

In conclusion, although it may seem easy to assume that remittances positively impact children's rights **realization** such as education and health, there is actually no conclusive data, nor definite findings to support this assumption.

Although the current volume of remittances would seem a great resource to tap for the protection and promotion of these rights, the fact remains that migration involves the separation of one or both parents from their children and therefore goes against the best interest of the children. It is therefore important not only to find ways to increase the positive effect of remittances on these rights, but to promote the best use of those remittances, i.e. the creation of assets, as well as of human and social capital.

Secondly, it is important to acknowledge that in the case of the Philippines, a large share of the remittances are used to repay debts incurred as a result of the heavy cost association with migration. In order to believe that remittances can have a quick positive effect on the realization of children's rights, one or all of the following must occur: an intervention planned at the policy level, migrant/migrant family access to safety nets at least during the first year of OFW's abroad, or interventions aimed at re-orientation the pattern of remittance use.

Lastly, reducing the vulnerability of OFWs when abroad would not only increase their capacity to fulfill their duties towards their children but also contribute to increasing the volume of remittances sent, thereby increasing the potential of using remittances for children's rights realization.

6. Research and Policy Agenda

As a result of our analysis, it is suggested that a broad scope of research work needs to be undertaken to support policy development and program planning. The proposed research agenda draws from the different issues and angles discussed by the paper. More details can be found in the matrices presented in Annex A.

6.1. Research agenda

At the macro-level

- national level baseline data, trends, patterns of migration with emphasis on TOWS/IOWS, with dimensions on age group, gender, educational level, household income level, urban-rural, occupation, country of work, compensation

At the micro-level

- patterns and trends of remittance utilization, decision-making by: household type, gender of overseas worker, income and educational level of household, rural or urban, occupation type and country of work, length of contract
- assessment of the psycho-social impact of remittances and migration:
 - On the separation from father, mother or both for specified periods of time, by country of work and by occupation type
 - By age and gender of children, by income and educational level of household, by rural or urban
 - On the quality of learning and health profile of children

- By age and gender of children, by income and educational level of household, by rural or urban

6.2. Policy Agenda

Below is a summary of the different policy development challenges for the Philippine government, civil society (NGOs, academia), media, parents and families. A more thorough explanation is provided in the matrices presented in Annex A.

Government

Legislative agenda

- Development of a clear State policy towards the separation of children from their parents because of overseas work (especially when very young children are at risk of being separated from their mothers)
- Stronger implementation of existing laws and regulations to protect children's rights against the impact of migration (pro-family and pro-children best interests migration law)
- Bilateral negotiations with countries where TOWS/IOWS are deployed to ensure protection of migrants abroad – this would reduce their vulnerability and increase their ability to use remittances to fulfil their duties towards their children. Additionally, these negotiations should secure the rights of migrants and their families, particularly children, i.e. enforcement of contractual obligations of employers, provision of medical and dental insurance, and recovery of maintenance for children
- Drafting of new laws and regulations to protect children (official statistics on OW incorrectly show age 15 as lowest age of overseas workers) and women from working in risky occupations and countries
- Elimination of legislated discrimination against children and women. Examples of such are age limitation for migrant workers and discrimination against children born out of wedlock
- Provide a clear policy environment, including relaxing taxation rules that would encourage financial and technical contributions from overseas Filipinos. These contributions would help contribute to the development of their local communities, with particular emphasis on the promotion and advancement of children's rights

Resource allocation agenda

- Expanded financial support for mechanisms of the State that provide protection and support for migrants and their families particularly children
- Streamlining of government-sponsored, migrant-focused support agencies such as POEA and OWWA to ensure that resources are generated and deployed effectively and efficiently
- Prioritization of the children's rights agenda in the budgeting process, particularly in terms of protection, education and health

Civil Society, Academia and the Media

Public education and promotion agenda

- Champion the agenda of children and women by supporting existing programs of the government and ensuring that any progress made towards their rights is protected and expanded
- Advocate the development and implementation of responsive and effective policies aimed at mitigating the socio-economic impact of migration on women, children and families, while optimizing the opportunities available from the globalization of labour
- Support public education campaigns to raise the awareness of the different stakeholders who form part of the strategy or agenda of protecting women, children and families from the negative impact of migration
- Promote discussions and sharing of information on issues, trends, patterns, practices, mechanisms, institutional arrangements and methodologies that will advance the agenda of women and children with respect to migration
- Raise the awareness of families on the rights of children and the particular needs of women

Research and development

Conduct better research work on the psycho-social impact of migration on children and women

Model intervention mechanisms in managing negative psycho-social impact on women and children

Promote the best practices among NGOs, self-help groups and community-based organizations who aim to enhance the social and economic viability of the households of migrant workers

Parents and Families

- Ensure that parents are with their children in their growing up years
- In cases where parents are migrant workers, ensure that the extended family under whose care children are entrusted are capable of raising children in an atmosphere and attitude that is closest to those that can be provided by their parents
- Ensure that children are not allowed to work in occupations and places that are risky and where there is little or weak protection available for them

Support families whose parents are overseas to provide children with the care and attention they need

7. Annexes

7.1. Annex A: Human rights based matrices of analyses

Migration and Children's Rights: Analysis Matrix on the Indicative Impact, Policy and Research Agenda

Children as Overseas Workers

Children's Right: PROTECTION FROM SEXUAL EXPLOITATION, CHILD PORNOGRAPHY AND TRAFFICKING		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	Female entertainers as young as 13 are exposed to abuse in Japan and elsewhere Jobs as entertainers often lead young girls into prostitution Irregular or undocumented migrants, particularly girls whose travel documents are fake, are vulnerable to sale and trafficking			
Remittance issue to address	In this particular case, the migration has to be properly addressed (issue of very young children, links with prostitution, etc) before considering the best use of remittances. Who benefits from the flow of remittances of young female entertainers? Is it their parents?			
Gaps of Rights (What they must receive?)	Children should not be allowed to work, particularly in jobs that expose them to risks of sexual exploitation, child pornography and trafficking.			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	Intensify implementation of RA 9208 (Anti-Trafficking law), RA 7610 (Special Protection for Children) Support the NGO network against child prostitution and sexual exploitation Strengthen Anti-Illegal Recruitment Coordinating Councils <u>UN CRC Committee recommendations:</u> Review of relevant domestic laws Set clearly defined minimum age of sexual consent	Support advocacy programs targeting sexual exploitation, child pornography and trafficking	Not to allow children to work, particularly in high-risk occupations and areas.	

	<p>Study causes, nature and extent of commercial sexual exploitation and trafficking of children</p> <p>Provide adequate programs according to international commitments</p> <p>Pay particular attention to existing risk factors such as growing sex tour in the region</p> <p>Launch awareness-raising campaigns</p> <p>Endorse the recommendations by the Human Rights Committee in 2003 on taking appropriate measures to combat all forms of trafficking</p>		
<i>Capacity gap to undertake action required</i>	<p>Like many similar migrant-sending countries, the Philippine government is in a weak negotiating position.</p> <p>It heavily relies on remittances to maintain fiscal stability</p> <p>Weak political will to translate policy into action. For instance, RA 8042 was passed a decade ago. Meager resources devoted to arm the law with enough teeth have practically rendered it useless in protecting migrants and their families.</p> <p>The OWWA has allocated minimal personnel and resources to meet its obligations to protect migrants and their families under RA 8042.</p>	<p>Lack of awareness among NGOs and the media establishment on the issues of discrimination against children, particularly the children of temporary overseas workers living with their parents abroad.</p>	<p>Lack of awareness of the risks that accompany allowing children to work, particularly in risky jobs and locations.</p> <p>Poverty will continue to exert pressure on families such that they will find themselves having to sacrifice their children for financial gain.</p>
<i>Pre-requisite</i>	<p>Political will to declare a definite State policy on migration.</p> <p>RA 8042 must be amended or a new legislation passed to provide for regulatory control of migration among vulnerable age-groups.</p>	<p>Access to information and commitment to focus on the issue of migration and children's rights</p>	<p>Education and access to information</p> <p>Alternative income sources</p>

Children Left Behind by Temporary Overseas Workers

Children's Right: Non-discrimination		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>There is a distinct social stigma at family, community and societal level of children born out of wedlock. This is heightened in cases where the mother is working as “entertainer” or as a commercial sex worker.</p> <p>Children who are able to live with their parents abroad tend to suffer from discrimination from the receiving State whether in the form of political, social, economic or legal discrimination, limited or denial of access to health and education.</p>			
<i>Issue to be addressed by remittances</i>	<p>How can remittances also benefit children born out of wedlock, given the cultural constraints, social context, etc?</p> <p>How can remittances benefit children who live abroad with their OFW parents but who are discriminated against?</p>			
<i>Gaps of Rights (What they must receive?)</i>	<p>Children must have the same access to social services, legal protection and social support irrespective of the circumstances of their births. Parents have the responsibility to ensure that their children are eligible for rights and recognition, whether born in the country of origin of parents or in the country where their parents work.</p> <p>The discrimination against children who live with migrant workers abroad should be eliminated.</p> <p>Children born out of wedlock continue to be discriminated by Philippine society. This discrimination must be totally eliminated, starting with changes from a legal perspective.</p>			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p>Pursue bilateral negotiations for the protection of migrants, particularly women and children</p> <p>Review the Family Code of the Philippines to ensure that all provisions that may be construed to discriminate against children born out of wedlock are eliminated.</p> <p>Implementation of the provisions of the Child</p>	<p>Intensify NGO initiative to amend the Family Code to eliminate all discrimination towards children born out of wedlock</p> <p>Media sensitivity to issues of “illegitimate” children is critical in educating the public on their equal rights and impact of discrimination against them.</p>	<p>Ensure that children are born under a legal family environment, such that a child’s birth circumstance does not become a source of discrimination.</p> <p>Demand appropriate social protection for them and their children when negotiating employment contracts.</p>	

	<p>and Youth Welfare Code (PD 603), the Family Code (Related Provisional EO 209) and the Special Protection Act (RA 7610)</p> <p><u>UN CRC Committee recommendations:</u></p> <p>Ensure effective implementation of existing laws</p> <p>Adopt a proactive and comprehensive strategy to eliminate all forms of discrimination</p> <p>Review laws in order to secure the right to equal treatment, inheritance and abolish the discriminatory classification of those children as “illegitimate”</p>		
<i>Capacity gap to undertake action required</i>	<p>Like many similar migrant-sending countries, the Philippine government is in a weak negotiating position.</p> <p>It heavily relies on remittances to maintain fiscal stability</p> <p>Weak political will to translate policy into action. For instance, RA 8042 was passed a decade ago, and the meager resources devoted to arm the law with enough teeth have practically rendered it useless in protecting migrants and their families.</p> <p>The OWWA has allocated minimal personnel and resources to meet its obligations to protect migrants and their families under RA 8042.</p>	<p>Awareness among NGOs and the media establishment on the issues of discrimination against children, particularly the children of temporary overseas workers living with their parents abroad.</p>	<p>Awareness among migrants about the rights of their children against discrimination.</p> <p>Ability to negotiate fair contracts with employers.</p> <p>Lack of support from government in terms of negotiating employment contracts.</p>
<i>Pre-requisite</i>	<p>Political will to declare a definite State policy on</p>	<p>Access to information and commitment to focus on the issue of migration and</p>	<p>Access to information</p> <p>Access to government</p>

	<p>migration.</p> <p>RA 8042 must be amended or a new legislation passed to provide for regulatory control of migration among vulnerable age-groups.</p>	children's rights	support in contract negotiations
--	--	-------------------	----------------------------------

Children's Right: NAME, NATIONALITY AND IDENTITY		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>There are cases where the birth registration documents of children born abroad are not recognized unless they are authenticated in the State where they were issued. This situation surfaces as a problem when parents have returned home and without the means to undertake this authentication.</p> <p>Migration can result in an "orphan feeling" among the children who are left behind as well as prevent them from getting the sufficient knowledge of their social, cultural and historical background that is necessary for them to shape their identity</p>			
<i>Issue to be addressed by remittances</i>	To solve this, it is a prerequisite to first address the issue of migration and children born abroad or out of wedlock. It is also necessary to make sure that all children of OFWs are registered.			
<i>Gaps of Rights (What they must receive?)</i>	The birth of children should be appropriately registered, with parents ensuring that the records are kept safe and ensuring that they are in form and substance acceptable to their home country and in cases where the children are living with them, acceptable in the State where they are working.			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p>Provide for a dual birth registration system, i.e., allowing dual birth registration in the Philippines and in the State of birth</p> <p><u>UN CRC Committee recommendations:</u></p> <p>Encourage and facilitate parents, irrespective of their residence status, to register their children born abroad</p>	<p>Continue to support projects relating to birth registration.</p> <p>Educate temporary overseas workers about the significance and importance of proper birth registration for their children.</p>	<p>Even before conceiving a child, both parents must ensure that their offspring/s will have the proper nationality and identify.</p> <p>This includes ensuring children are born within marriage and that births are properly registered and documents kept safe.</p>	

Capacity gap to undertake action required	Facilitate the development of an enabling legal instrument that will provide for documents of birth to be issued to children born abroad	Familiarity with birth registration issues and procedures	Awareness of the issues surrounding the need for proper birth registration documents for children both born abroad and access to information on the proper course of action to take.
Pre-requisite	Legal study on appropriate instrument/s	Access to information	Access to information

Children's Right: RIGHT TO LIFE		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	Impact on Life Cycle of Child	X		
	<p>There is growing medical proof that the development of a child begins at the womb: women who get pregnant while working abroad are at high risk of improper and/or inadequate pre- and post-natal care as they usually do not have health insurance or maternity benefits.</p> <p>In most cases, domestic helpers who get pregnant suffer abuse from their employers because of impediments to their physical movements brought about by pregnancy.</p> <p>The Philippine diplomatic offices are understaffed and unable to deal with many cases involving migrants.</p>			
Remittances issue to address	<p>Before considering the best use of remittances in this case, it should be clear that migration should not put pregnant women, the development of the womb or the young children of OFW women at risk.</p> <p>How can remittances permit the access of OFWs to a minimum medical coverage for their children and themselves?</p>			
Gaps of Rights (What they must receive?)	Children have the right to develop within the mother's womb in the right physical, mental and emotional condition. Migration should not be an excuse to have this right waived.			
Duty Bearer	Government	Media, NGOs, Research	Parents and Family	
Responsibilities and Action required	<p>Develop a crisis plan for the most relevant and critical diplomatic posts in order to address needs of migrants, particularly children, who become involved in legal and political cases.</p> <p>Pursue bilateral agreements for the protection of migrants and their children, especially those of very young age.</p> <p>Strengthen diplomatic offices in particularly critical regions like the Middle East and East Asia</p> <p><u>UN CRC Committee</u></p>	<p>Media coverage of migrants' cases, bringing them to the attention of government. This role must be intensified given the sensitivity of the Philippine government to media stories.</p> <p>Advocacy + lobbying for extended medical coverage for OFW women when abroad and pregnant or having children</p>	<p>Ensure that the welfare of the mother and child is protected during pregnancy</p> <p>Expand social network in country of work</p> <p>Obtain the appropriate medical / insurance coverage when working abroad (see UN CRC committee recommendations)</p>	

	<p><u>recommendations:</u></p> <p>Expand benefits from the Overseas Workers Welfare Fund (OWWA) because these are inadequate and access is often difficult</p>		
Capacity gap to undertake action required	<p>Capability, resources and political will to engage receiving nations in bilateral discussions on the protection of temporary overseas workers.</p> <p>Clear policy on temporary overseas workers and their families needs to be developed.</p> <p>Resources should be allocated to programs that aim to protect migrant workers as provided by RA 8042.</p>	Access to information and familiarity with the issues of temporary overseas workers and their families.	<p>Poverty will continue to put pressure on poor families to send parents and children to work abroad, even to high risk jobs and countries.</p> <p>The awareness that children need a wholesome environment to achieve their physical, emotional, intellectual, moral and social potentials is not that widespread among parents.</p>
Pre-requisite	Political will	Awareness-raising programs	<p>Economic opportunities to enable parents to provide for the well-being of their children</p> <p>Education and access to information</p>

Children's Right: STATE OBLIGATION TO ENSURE NECESSARY CARE AND PROTECTION		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>There is no clear State policy on migration. Since the passage of RA 8042 in 1995, the deployment of temporary overseas workers has continued, reaching the current rate of about 2,500 daily departures.</p> <p>Women have increasingly dominated this deployment, including going to countries and jobs that continue to pose risks to them. This is contrary to the recommendations of the Gancayco Commission (upon which RA 8042 was based), which proposed that women veer away from jobs and countries where they are vulnerable.</p> <p>RA 8042 even provided for the recall of under-aged migrant workers. However, the recent government statistics indicate that this provision of the law has not been followed.</p> <p>This State obligation to protect also applies to children left behind in a single parent family, an environment which may not prove to be the ideal for them to receive adequate care and protection</p>			
<i>Issue to be addressed by remittances</i>	<p>As already recommended by the Gancayco commission, migration should absolutely not put at stake the OFWs or increase the vulnerability of OFWs and/or that of their children.</p> <p>A share of the taxes gained from remittances transfers should be used for the care and protection of children, either those left behind or those gone abroad.</p>			
<i>Gaps of Rights (What they must receive?)</i>	<p>The Philippines is a signatory to the CRC. It must therefore ensure that in all its policies and actions, the rights of children are protected. Migration cannot be excused by the Philippine government as merely a global phenomenon that it is helpless to react to. There are 7.5 million Filipinos living and working abroad, and 63% of them are temporary or irregular/undocumented.</p> <p>NGOs have raised the issue of girls below 18 who work abroad as entertainers and domestic helpers. The Philippine government must not allow these children to work, particularly in countries and jobs where they are at high risk of abuse, exploitation and discrimination.</p>			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p>Develop a State policy on migration, providing for the protection of temporary overseas workers and their children.</p> <p>Develop State policy</p>	<p>Advocate for full implementation of Philippine government's commitment to the CRC and the protection of migrants and their families.</p>	<p>Ensure that their children do not work abroad while they are still young and unprotected.</p> <p>Ensure that mothers are not employed in jobs that are risky and in countries</p>	

	<p>banning the deployment of children (18 years old and below).</p> <p>Develop State policy banning the deployment of women in jobs and countries where they are vulnerable to abuse, exploitation and discrimination.</p>	<p>Use advocacy methods to highlight the case of under-aged temporary overseas workers and women working in high-risk countries and jobs.</p>	<p>where they do not have access to protection.</p>
<p><i>Capacity gap to undertake action required</i></p>	<p>The capacity of the Philippine government to perform regulatory functions is generally weak.</p> <p>While the tight budget situation of the National Government is a challenge in terms of funding programs targeting migrants and their families, the public funds lost to corruption are a more urgent area to focus on.</p>	<p>A number of NGOs are engaged with advocacies promoting the rights of migrants; while they are mostly clustered in the NCR, some of them are affiliated with regional networks. They need to work together to begin drafting a framework for policy discussion on migration and development issues.</p>	<p>Economic pressures are usually the main reason why parents allow under-aged children to work abroad. The same is true with allowing women to work in countries and jobs that are risky.</p>
<p><i>Pre-requisite</i></p>	<p>Political will must be exercised in ensuring the fulfillment of the Philippine government's commitment to the CRC.</p>	<p>Awareness of NGOs about other issues related to the migrants sector, particularly the issues of under-aged temporary overseas workers.</p> <p>Expansion of NGO work in the regional centers to ensure that they reach the communities where many overseas workers come from.</p>	<p>Economic improvement of families to enable them to provide for the needs of their children without having to allow them to work abroad and in jobs considered risky.</p>

Children's Right: BEST INTEREST OF THE CHILD		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p><u>At the level of the Family:</u></p> <p>Children normally do not have a say in the decision of parents to work abroad; while parents may decide to live and work abroad to provide for better material things for their children, the mental, emotional and psycho-social costs are not inputted in the decision-making process</p> <p>Separation for long periods of time from one or both parents imposes substantial anxiety, emotional stress and trauma, and in some occasions leads to child behavior which is harmful to him or her self.</p> <p>In the absence of both parents, the child may likely develop an “orphan” feeling, or that of abandonment, and is likely to develop resentment against the parents.</p> <p>The mere presence of both parents is emotionally, spiritually, morally and psychologically nurturing to children.</p> <p><u>At the level of Society:</u></p> <p>States cannot stop its citizens from living and working abroad, but when the State encourages them to do so, a host of complex issues arise and this complexity must not become a reason for the state not to fulfill its obligation</p> <p>All stakeholders need to weigh the balance between economic opportunities being offered by migration and the best interest of children and that of future generations.</p>			
Issue to be addressed by remittances	<p>If the separation for long periods of time from one or both parents creates substantial anxiety, emotional stress and trauma, and in some occasions can lead a child to behave self destructively, how can remittances be used to overcome this possibility?</p> <p>How can remittances be channeled at family / community levels so that migration does not remain the single opportunity for thousands of families to earn a living? How can they be used to make migration more marginal in the society so that the best interest of the child is better respected?</p> <p>How can the decision on how to use the remittances be made more participative at the family / community levels so that remittances contribute better to the rights of children and their best interests in general?</p>			
Gaps of Rights (What they must receive?)	<p>Children need the presence of parents, starting in their early formative years and continuing all the way to their teen-age years. The prolonged absence of either mother or father at any time during these period results in psycho-social gaps in the child's development.</p> <p>The presence of mothers for children below age 3 and for both parents for children below age 5 is essential. The gaps in their growth potential are exacerbated when both parents are absent.</p>			

Duty Bearer	Government	Media, NGOs, Research	Parents and Family
Responsibilities and Action required	<p>Protect the right of children to be reared by both parents particularly when they are young.</p> <p>The Philippine government should not allow deployment of:</p> <p>both parents with children below age 5</p> <p>mothers with children below age 3</p> <p>more than one (1) year for both parents with children below age 18</p> <p>either parent for more than two (2) years with children below age 18</p>	<p>NGOs in the migrants sector need to increase their understanding of the impact of migration on children's and women's rights.</p> <p>Conduct studies on the psycho-social impact of separation between children (for boys and for girls) and their parents (father or mother)</p> <p>Advocate for banning the deployment of either parents with young children.</p>	<p>Technology like SMS, mobile phones and the Internet are making communication over long distance easier, allowing children to have real-time contact with their parents abroad.</p> <p>Parents need to understand that there are non-material side-effects when a father, a mother or both parents (the effects are different under the three cases and different also for boys and for girls) leave their children behind to work abroad.</p>
Capacity gap to undertake action required	Impact studies of separation of parents from young children	<p>Funding support</p> <p>Awareness of issues concerning separation of parents from their young children</p>	Awareness of the importance of parental presence in the rearing period of children
Pre-requisite	Renewed commitment by the Philippine government to fulfill its obligations under the CRC and to fully protect overseas workers	Donor agencies need to be aware of the significance of the issues.	Education and awareness-raising programs.

Children's Right: RESPECT FOR THE VIEWS OF THE CHILD		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>		X	X
	The expression of children's sentiments regarding migration may be stifled because parents emphasize the economic benefits of migration, i.e. that they are working hard and enduring danger for their children), and in a sense, children develop some form of guilt that the separation is their fault.			
<i>Issue to be addressed by remittances</i>	<p>No child would agree to see one of his/her parents going abroad for a long period of time</p> <p>The decision to migrate does not respect the views of the child, and this should be made clear to the potential OFW's. At best, remittances can only ease the negative effect of migration.</p> <p>The State should offer alternative options to emigration as well as make it easier for OFWs to come back to the Philippines under privileged conditions.</p>			
<i>Gaps of Rights (What they must receive?)</i>	Children should be allowed to express their views on a family's plan for any of the parents to work abroad for long period of time. To respect the views of children means to consider them seriously and not merely dismiss them as unimportant because they are views of children.			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p>Strong democratic traditions of the Philippines support the cultivation of freedom of expression</p> <p>The <i>Sangguniang Kabataan</i> (Youth Assembly) is a State instrument to institutionalize youth participation in national development and political affairs</p> <p><u>UN CRC Committee recommendations:</u></p> <p>Strengthen efforts to promote, within the family, schools and other institutions, a respect for the views of the child and facilitate their interactive participation in all matters</p>	Expand various private initiatives that allow children to express their views.	Encourage children to express their sentiments, particularly in crucial family issues like migration	

	affecting them Undertake awareness-raising campaign on children's rights		
Capacity gap to undertake action required			Awareness of the right of children to express their views
Pre-requisite			Access to information regarding children's rights

Children's Right: BIRTH REGISTRATION		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>The birth records of children born abroad are often difficult to process. Upon return to the Philippines, local authorities demand that these records be authenticated in the country of birth. Parents come under pressure to produce them because these records are essential requirements for admittance to schools.</p> <p>Difficulties and embarrassment in birth registration of children born out of wedlock are also caused by strict requirements of the Catholic Church.</p> <p>Although it is easier in comparison to the registration of children born abroad, the birth registration process for those born in the Philippines is not systematic.</p>			
Issue to be addressed by remittances	<p>If remittances cannot contribute to the rights of children who have no official existence, how can remittances be systematically used to help birth registration, and its related costs?</p> <p>How to make OFWs understand that birth registration is necessary for the realization of children rights throughout their lives?</p>			
Gaps of Rights (What they must receive?)	Children must be accorded by the Philippine government the right to proper birth registration as well as the right of recognition by other States of the validity of these birth registration documents.			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	<p>Continue the Unregistered Children Project conducted with PLAN and NSO</p> <p><u>UN CRC Committee recommendations:</u></p> <p>Develop an efficient and free of charge birth registration system</p> <p>Use of mobile birth registration units</p> <p>Ensure that children born abroad without official documentation are still allowed to access basic services such as health and education</p>	Continue to support birth registration programs	Ensure that all children born are appropriately registered and birth records are kept secure	
Capacity gap to undertake action required	Funding allocation for birth registration program	Funding support	Education on the importance of proper birth registration documents	

Pre-requisite	Continued commitment to birth registration as a right of the child	Awareness of donor agencies about the significance of proper birth registration	Awareness and access to information
---------------	--	---	-------------------------------------

Children's Right: CORPORAL PUNISHMENT		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>	X	X	X
	Children who are left behind by parents may be exposed to the risk of corporal punishment from schools or guardians			
<i>Issue to be addressed by remittances</i>				
<i>Gaps of Rights (What they must receive?)</i>	Children have the right to be protected from corporal punishment both in their home countries and abroad.			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<u>UN CRC Committee recommendations:</u> Prohibit by law all forms of corporal punishment in the home, in schools, in private and public institutions, in the juvenile justice system and the alternative care system.	Conduct public discussions on child discipline Develop alternative child discipline methods that are culturally adaptable and yet sensitive to the child in his/her present context	Develop creative ways to discipline a child and ensure that corporal punishment is not resorted to by any member of the family	
<i>Capacity gap to undertake action required</i>	Legal basis to prohibit corporal punishment	Knowledge on alternative child discipline approaches	Awareness of children's right against corporal punishment	
<i>Pre-requisite</i>	Legislation providing for a ban on corporal punishment at home and in school.	Access to research on the impact of corporal punishment on children	Education and access to information on children's rights	

Children's Right: PARENTAL RESPONSIBILITIES		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>Children who are left at a very young age by one or both parents are deprived of the right to develop the intimate relationship that is natural between parent and child; this is particularly significant during the early formative years of the child</p> <p>The impact of parental separation (different for mother or father or for both) is different depending on the sex of child and on the particular child life cycle the child is in (i.e. unborn, 0-2, 3-5, 6-12, and 13-17)</p> <p>The economic gains of migration must not be an excuse for parents to not fulfill their responsibilities as parents.</p>			
Issue to be addressed by remittances	<p>How can OFWs be made to use the remittances to better fulfill their responsibilities as parents?</p> <p>How to ensure that OFWs give enough share of their remittances to guarantee that "parental responsibilities" are fulfilled by the single parent left alone or the designated prime care takers acting as substitutes of parents ?</p>			
Gaps of Rights (What they must receive?)	<p>Children have the right to be reared by both their parents from the day of birth until their teen-age years.</p> <p>On the other hand, parents have the right to be with their children to rear them properly in a manner that develops their full physical, mental, emotional, moral and social potentials. When poverty forces parents to leave their children behind and therefore they are unable to rear them properly, the role of government in this equation is highlighted.</p> <p>Government must ensure that it has the appropriate policies to enable parents to rear their children, as well as allocate the necessary resources to implement such policies.</p>			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	<p>UN CRC Committee recommendations:</p> <p>Effective implementation of the Migrant Workers and Overseas Filipinos Act (RA 8042)</p> <p>Take all necessary measures to ensure that overseas Filipino workers, both women and men, are able to meet their parental responsibilities. This may be done through including through concluding bilateral agreements with</p>	<p>Advocate the protection of children's rights in the context of migration</p> <p>Develop alternative mitigating measures that will cushion the impact of migration on children</p>	<p>Rear their children on their own as much as possible.</p> <p>In cases of parents having to work abroad, ensure that children are left to responsible adults and monitor the care and guidance provided by these surrogate parents</p>	

	<p>countries of destination, and by facilitating family reunification and a stable family environment for the upbringing of children</p> <p>Develop and provide child-sensitive family counseling services for overseas Filipino workers and their children</p>		
Capacity gap to undertake action required	Awareness at the highest policy level about the need to ensure parents are able to fulfill their parental responsibilities	Funding source	<p>Skills and education to obtain sources of family income to ensure that parents do not leave their children behind to work abroad.</p> <p>Proper education on child-rearing and parental responsibilities</p>
Pre-requisite	Political will must be exercised in ensuring the fulfillment of the Philippine government's commitment to the CRC.	Children's issues receiving continued donor priority	Capacity to learn and available learning opportunities

Children's Right: RECOVERY OF MAINTENANCE		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	An Increasing number of Filipino children are born abroad, and in some cases, paternity has not been established Mothers encounter difficulties in the recovery of maintenance because of inability to contact the fathers. This is made more difficult by the absence of bilateral agreements.			
Issue to be addressed by remittances	How to make sure that those OFWs who must give recovery of maintenance will give the necessary share of their remittances to fulfill their duties as parents?			
Gaps of Rights (What they must receive?)	Children have the right to maintenance from their parents. Even if parents become separated, children have the right to obtain support from the State to help recover support from a parent who may be a national of another country. The Philippine government needs to sign bilateral agreements with countries receiving Filipino overseas workers to cover the recovery of maintenance for children.			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	UN CRC Committee recommendations Secure in practice the recovery of maintenance for the child Conclude bilateral agreements for reciprocal enforcement of maintenance	Advocacy for the issue of recovery of maintenance for the child	Ensure that the paternity of the child can be established in order to strengthen the case of recovery of maintenance for a child whose parent (mostly fathers) are foreign nationals	
Capacity gap to undertake action required	High policy-making bodies must be aware of the significance of recovery of maintenance issues	Awareness among NGOs about the significance of recovery of maintenance issues	Awareness among mothers about the right of children to recovery of maintenance	
Pre-requisite	Awareness has to be raised	Awareness has to be raised	Awareness has to be raised	

Children's Right: ABUSE, NEGLECT, MALTREATMENT AND VIOLENCE		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	Domestic abuse by adults under whose care children of migrants have been entrusted is a concern. Young children and adolescent girls are particularly vulnerable. Children left behind may feel neglected and be exposed to abuse, maltreatment and violence			
Issues to be addressed by remittances	How to make OFWs use part of their remittances to guarantee the well-being of their children, and avoid a situation where the children feel neglected and may be exposed to abuse, maltreatment or violence ?			
Gaps of Rights (What they must receive?)	Children have the right to be protected against all forms of abuse, neglect, maltreatment and violence. The absence of a parent or both parents increases the risk of exposure to these situations.			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	Strengthen the Councils for the Protection of Children (CPC) that are established at national and local levels. <u>UN CRC Committee recommendations:</u> Review all domestic legislation to penalize all forms of abuse against children, clearly define those crimes, including incest Conduct timely and adequate investigations of abuse Ensure that child victims have access to adequate counseling and multidisciplinary assistance with recovery and reintegration	Intensify the NGO monitoring of the CRC by bringing in more participants and establishing an orderly approach. Expand coverage of <i>Bantay Bata</i> hotline Abuse, neglect, maltreatment and violence against children, particularly of overseas workers, is an oft-repeated plot in TV soap operas. While this should have contributed to awareness-raising, the media needs to send a broader, stronger message that parents should not be leaving behind their children in the first place.	It is the responsibility primarily of the parents to ensure they are around to protect their children from all forms of harm either from themselves or from other people. In cases where parents work abroad, they must ensure that children are left to responsible adults and monitor the care and guidance provided by surrogate parents.	
Capacity gap to undertake action required	Funds of government agencies like the CPC and Council for the Welfare of Children (CWC) are limited. This indicates the low-priority that	Proper briefing on the issues of abuse against children and expanding the reach of on-going awareness-raising	Some parents may not be fully aware of the different forms of abuse that children can be exposed to. Their understanding of	

	government allocates for the issues they manage.	initiatives	emotional and psycho-social abuse must be raised and expanded to ensure that they become the frontline of defense for their own children.
Pre-requisite	Priority for the protection of children must be an integral part of the budgeting process.	Government agencies to highlight issue and donor agencies to support discussions	Education campaign

Children's Right: CHILDREN WITH DISABILITIES		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	Disabled children of migrants may likely suffer from diminished care and attention in the absence of one or both parents			
Issues to be addressed by remittances	How to make ensure that disabled children with at least one parent being an OFW receive a minimum of assistance from their parents to be able to live a decent life despite their disabilities?			
Gaps of Rights (What they must receive?)	<p>Children with disabilities need the same protection and opportunities for developing their full potentials as human beings as other children.</p> <p>The welfare and needs of disabled children of overseas workers should receive the appropriate share of the remittances of their parents. The surrogate parents caring for them should ensure that their needs and welfare are looked after well. This includes not just their physical needs but their intellectual, emotional, moral and social needs.</p>			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	<p><u>UN CRC Committee recommendations:</u></p> <p>Prevent and prohibit all forms of discrimination against children with disabilities</p> <p>Ensure equal opportunities for their full participation in all spheres of life</p> <p>Ensure that all public education policy and school curricula reflect the principle of full participation and equality, and that children with disabilities are included in the mainstream school system</p>	<p>Expand the education of the public on disabled children and their rights</p> <p>Continued advocacy to government on the need to ensure protection of disabled children and promotion of their prospects and conditions</p>	<p>Ensure that children with disabilities are provided appropriate opportunities to develop his/her talents and potential despite the impairment</p>	
Capacity gap to undertake action required	Continued awareness of government's commitment to fulfill its obligations to the CRC	Financial and human resources	Awareness among parents and surrogate parents about the right of disabled children to develop their full potential	
Pre-requisite	Continued pressures from civil society and international development organizations	Continued support from donors	Education and access to information on the rights of disabled children	

Children's Right: PROMOTION OF HEALTH AND HEALTH SERVICES		Child 0-5	Child 6-12	Child 13-18
Indicative Impact of Migration	Impact on Life Cycle of Child	X	X	X
	<p>Remittances are mainly spent on consumption and consumer durables, with health-related costs usually not a priority. Caretaker adults may ignore early signs of health problems and act only when symptoms worsen.</p> <p>This condition is exacerbated by the fact that parents who migrate do so by incurring huge debts such that a third of remittances are used for repayment of these debts.</p>			
Issues to be addressed by remittances	How to convince OFWs to give higher importance to health issues of their children?			
Gaps of Rights (What they must receive?)	The health of children must receive the appropriate share of the family expenditures. More importantly, health (both medical and dental, preventive and curative) expenditures for children should be a priority over living conveniences of families.			
Duty Bearer	Government	Media, NGOs, Research	Parents and Family	
Responsibilities and Action required	<u>UN CRC Committee recommendations:</u> Adopt necessary legislative, administrative and budgetary measures in order to fully implement the Health Sector Reform Agenda Provide adequate resources	Support public health programs through advocacy and monitoring of government budget on health Advocate among families of overseas workers the prioritization of children's health in the family expenditure pattern	Ensure that the health needs of the child are appropriately addressed, including immunizations and a balanced diet	
Capacity gap to undertake action required	Budget limitations	Database on families of overseas workers and knowledge of the expenditure patterns among families of migrants	Awareness of the importance of maintaining proper health of children and its impact on their emotional, mental and social development	
Pre-requisite	Budgetary priority for health expenditures	Baseline research	Education and access to proper information	

Children's Right: STANDARD OF LIVING		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>The basic consequence of migration, particularly for temporary and irregular workers, is the separation of parents from children. This fact is the fundamental issue in the discussion of remittances and children's rights.</p> <p>While remittances may actually provide for the physical needs of children, the CRC defines appropriate standard of living to include adequate physical, mental, moral, spiritual and social aspects that promote the development of the whole child.</p> <p>Legal guardians, extended family members and other responsible adults, under whose care children are left behind by parents, may not provide the same mental, spiritual, moral and social development opportunities as parents would. The surrogate parents may either be more restrictive to the child because of their obligations as caretaker or be overly permissive (if not completely ignoring such responsibilities) because the parents are not present to monitor the situation.</p>			
Issues to be addressed by remittances	<p>How to prevent OFWs from considering “standard of living” something attainable only through purchasing power and consumerism? How to ensure they do not forget other critical elements such as the physical, mental, moral, spiritual and social aspects of living?</p> <p>How to influence choices made by OFWs in the way they will increase the standard of living of their children?</p>			
Gaps of Rights (What they must receive?)	<p>Parents should provide a home environment promoting the mental, spiritual, moral and social development of children, including the immeasurable benefits from the presence of both parents. The mere presence of parents is not enough though. They must ensure that they actually provide guidance, care and discipline such that children achieve their full potential.</p> <p>In the case of parents working abroad, the spending pattern of remittances sent to the family at home should prioritize the welfare of children in terms of education, health and well-being. However, remittances should not be viewed as a substitute for parental upbringing and care.</p>			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	<p><u>UN CRC Committee recommendations:</u></p> <p>Raise the standard of living through a poverty reduction strategy</p> <p><i>Note:</i> Free flow of remittances to support children is explicitly provided for under Art 27 (4) of the CRC.</p>	Sponsor multi-stakeholder discussion on migration and its impact on children and youth	Ensure that children are provided a wholesome environment to nurture their talents and potential.	

<p>Capacity gap to undertake action required</p>	<p>Poverty levels remain high nationwide. While government statistics indicate that most deployments are from the NCR and Region 3 and 4, there is a high likelihood that the NCR departures are actually due to the fact that most overseas workers “pass through” the NCR before departure. The more complete deployment picture should include the idea that most overseas workers are from rural families escaping poverty at home.</p>	<p>Financial and technical resources</p>	<p>Poverty will continue to put pressure on poor families to send parents and children to work abroad, even to high risk jobs and countries.</p> <p>However, the awareness that children need a wholesome environment to achieve their physical, emotional, intellectual, moral and social potentials is not that widespread among parents.</p>
<p>Pre-requisite</p>	<p>As a political economy, the Philippine State remains captive to the different political tribes that regard it as a booty that is subject of “hunting-gathering” campaigns every election time.</p> <p>Governance, fiscal and institutional reforms are the key steps in liberating the State from this “hunting-gathering” condition. This must happen before the Government can expect to succeed in eradicating poverty in the country. There are strong arguments to buttress the position that poverty is not a result of resources being limited but rather that they are not deployed efficiently.</p>	<p>Continued support by donor agencies</p>	<p>Education remains the key ingredient in order for parents to provide the desired standard of living for the appropriate upbringing of children.</p>

Children's Right: ADOLESCENT HEALTH		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>			X
	Teen-agers without appropriate parental guidance may be at an increased risk of sexually-transmitted diseases, early marriages, early/unwanted pregnancies and abortions.			
<i>Issues to be addressed by remittances</i>	Family level State level : in favor of children left alone ...			
<i>Gaps of Rights (What they must receive?)</i>	<p>As their life cycle evolves towards young adulthood, adolescents need guidance from their parents. They need to be taught the proper care of their bodies. They need to be aware of and deal positively with the physiological and emotional changes their bodies are undergoing.</p> <p>In particular, girls need their mothers to guide them into the role of women in marriage and in the proper rearing of children. Fathers should be able to support their wives in this role.</p> <p>For children of temporary overseas workers, the responsibility of guiding teen-agers would fall into the hands of surrogate parents. These adults must be prepared to take on this role. As part of this, they must be aware that teen-agers have particular needs and demands that when not met properly can lead to various dysfunctional and anti-social behavior.</p> <p>Open communication lines must be kept between overseas parents and their teen-age children to assure them of parental support and care.</p>			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p><u>UN CRC Committee recommendations:</u></p> <p>Ensure access to reproductive health counseling and provide all adolescents with accurate and objective information and services in order to prevent teen-age pregnancies and related abortions</p> <p>Strengthen formal and informal education on sexuality, HIV/AIDS, STDs and family planning</p> <p>Education on alcohol, drugs and tobacco</p>	NGOs and media need to support different family planning programs and sex education campaigns, both in terms of advocacy and public education	Development sensitivity to the evolving needs of growing children.	

Capacity gap to undertake action required	Limited resources allocated for adolescent health programs	Financial and human resources	Awareness of the issues affecting adolescents. It appears that teen-agers are a misunderstood segment of the population. Parents often feel helpless in dealing with the problems of adolescents.
Pre-requisite	Recognition of the importance of promoting adolescent health	Continued donor support for adolescent health programs	Education and access to information on adolescents and their needs

Children's Right: PROTECTION FROM HIV/AIDS		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>There are nearly 0.3M sea-based Filipinos who have a high HIV/AIDS risk profile, and who therefore endanger their spouses and children</p> <p>Children who illegally work abroad as entertainers are equally exposed to sexually transmissible diseases</p> <p>Children left behind may adopt risky sexual behavior</p>			
Issues to be addressed				
<i>Gaps of Rights (What they must receive?)</i>	<p>Children of overseas workers, both land-based and sea-based, have the right to protection against HIV/AIDS and other sexually transmissible diseases (STD).</p> <p>Under-aged overseas workers should not be allowed to migrate as they are at very high risk of exposure to HIV/AIDS and other sexually transmissible diseases (STD).</p>			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p>AIDS Prevention and Control Act (1998)</p> <p>Establishment of the AIDS Prevention and Control Program (NAPCP)</p> <p><u>UN CRC Committee recommendations:</u></p> <p>Strengthen existing program</p> <p>Expand public education</p>	<p>Expand public education programs, particularly those targeting sea-based workers and talent promoters of entertainers</p>	<p>Ensure that as parents, migrants are protected from HIV/AIDS</p>	
<i>Capacity gap to undertake action required</i>	Limited resources allocated for prevention of HIV/AIDS and other STD's	Financial and human resources	Awareness of prevention practices	
Pre-requisite	Continued recognition of the social and economic costs of HIV/AIDS and other STD's	Continued priority by donor agencies	Education and access to information	

Children's Right: PARENTS HAVING COMMON RESPONSIBILITY FOR UPBRINGING OF CHILDREN		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>Lack of proper parental guidance increases the likelihood of the child developing various dysfunctional and anti-social behaviors.</p> <p>Legal guardians, extended family members and other responsible adults, under whose care children are left behind by parents, need to understand the importance of proper role models and these should be provided.</p>			
Issues to be addressed by remittances				
Gaps of Rights (What they must receive?)	<p>Humans are social beings (Fukuyama, 2004). They are capable of developing norms of behavior that guide their relationships with each other and with their surroundings. Parents have a distinct role in the formation of positive values and behavior among children, and in a larger context, in shaping society.</p> <p>Both fathers and mothers must rear their children together; each performing their distinct roles and responsibilities. Children in turn deserve the upbringing from both parents. Surrogate parents, in the case of parents working abroad, need to realize the magnitude of their responsibilities in ensuring that children under their care grow up to their full human potential.</p> <p>The CRC was explicit in recognizing the principle that “both parents have common responsibilities for the upbringing and development of the child” (Art 18[1]).</p>			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	Promote the family as the primary citizenship-developing institution. The integrity of the family, both nuclear and extended, must be protected.	Advocate for proper parental care for children, particularly among temporary overseas workers.	Ensure that children are provided parental care by both parents	
Capacity gap to undertake action required	Need a policy on migration that protects the integrity of the family as the basic social institution.	Baseline studies on the impact of migration on the family and parental responsibilities.	Awareness of the importance of the family on the development of children	
Pre-requisite	Political will to make a clear stand on migration and its impact on families and children.	Support for research	Education and access to information	

Children's Right: EDUCATION		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>Raw data indicate that about 10% of remittances are utilized for the education of children</p> <p>While remittances may enable children to attend better schools, they are likely to experience psycho-social problems in the absence of one or two parents</p> <p>During parent-teacher conferences/meetings, children may feel embarrassed that his/her parents are not around</p> <p>Schools are extensions of the home; if there is an emotional void that a child experiences at home, its impact is likely to be carried on into the classroom and this is likely to affect his mental and emotional ability to cope with academic pressures</p>			
<i>Issue to be addressed</i>	<p>How can remittances be more systematically used to contribute to children's higher achievements at school (attendance, completion, etc.)?</p> <p>How can remittances be more systematically used to permit access to ECCD?</p>			
<i>Gaps of Rights (What they must receive?)</i>	<p>The family expenditure pattern must reflect the prioritization of children's welfare, particularly health and education.</p> <p>Children must be provided the best opportunities to develop not only physically and emotionally, but intellectually, morally and socially as well. Formal schooling contributes substantially to the well-rounded development of children.</p> <p>However, parental guidance and presence are essential in enhancing the learning capabilities of children. Surrogate parents need to realize the importance of providing emotional support for children so that they may do well in school.</p>			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p>Free public education at the primary level and to some extent at the secondary level</p> <p><u>UN CRC Committee recommendations:</u></p> <p>increase budgetary allocation</p> <p>ensure free and universal primary education</p> <p>adopt measures to decrease the drop-out rate in the primary and secondary levels</p> <p>upgrading of teachers' training</p> <p>provide more</p>	<p>Advocate and monitor government budgetary allocation for education.</p> <p>Work towards the elimination of corruption in the public school system and in Dept of Ed.</p> <p>Support reforms in the education sector, particularly in improving teacher competencies in teaching math, science and English subjects.</p> <p>Encourage families of migrants to prioritize their children's education in the family expenditure pattern</p>	<p>Ensure that children receive the appropriate education, formally at school and informally at home. The home is the ideal place for children to develop emotional, spiritual, moral and social potentials.</p>	

	infrastructure		
Capacity gap to undertake action required	Limited financial resources to improve education	Baseline data on family expenditure patterns among migrant workers and their families Financial and human resources	Awareness of the importance of education not only to the child but for the family, as education improves their conditions and prospect of escaping the poverty trap. .
Pre-requisite	Governance, fiscal and institutional reforms that will result in more efficient use of resources	Support for research on expenditure patterns of migrant households Continued support from donor agencies	Education and access to information

Children's Right: LEISURE, RECREATION AND CULTURAL ACTIVITIES		Child 0-5	Child 6-12	Child 13-18
<i>Indicative Impact of Migration</i>	<i>Impact on Life Cycle of Child</i>	X	X	X
	<p>In some cases, a balanced life of leisure and recreation is difficult to find among children of migrants. Since the family can afford to buy expensive toys and appliances, and often because parents shower their children with toys to make up for their absence, children become addicted to toys and television.</p> <p>This situation may likely result in gaps in the emotional maturity of children. It will also likely impact on the ability of children to develop adult responsibility as well as cultivate meaningful relationships.</p>			
<i>Issues to be addressed</i>	<p>How can remittances be used to permit increased access not only to leisure and recreation but also to cultural activities?</p> <p>How can remittances be used at a community level to develop the required infrastructures and offer the adequate services?</p>			
<i>Gaps of Rights (What they must receive?)</i>	Parents or adult should provide children with the appropriate guidance in pursuing leisure, recreation and cultural activities. They must ensure that the pursuit of these activities is in a balanced manner and not in a way that is detrimental to their well-rounded education.			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<p><u>UN CRC Committee recommendations:</u></p> <p>Take all necessary efforts, and strengthen current programs to promote the right of the child to engage in play, particularly to the most vulnerable groups</p>	Continued advocacy of government fulfillment of its obligations to the CRC	Provide children with balanced leisure, recreation and cultural activities	
<i>Capacity gap to undertake action required</i>	Prioritization of State obligation to the CRC	Financial and human resources	Poverty (in situations where parents have to work abroad) and lack of time are the major obstacles to the ability of parents to exercise proper guidance to their children.	
Pre-requisite	Continued recognition of the importance of the CRC in nation-building	Continued priority of CRC monitoring among NGOs	Awareness of the need for a balanced life of leisure, school and other activities	

Children's Right: PROTECTION FROM DRUG AND SUBSTANCE ABUSE		Child 0-5	Child 6-12	Child 13-18
<i>Indicative Impact of Migration and Remittances</i>	<i>Impact on Life Cycle of Child</i>			X
	Absence of proper parental presence and guidance may contribute to drug abuse among children Family problems are often cited as the major driver of drug and substance abuse			
<i>Issues to be addressed</i>				
<i>Gaps of Rights (What they must receive?)</i>	Parents must guide their children in order to prevent them from being involved in drug and substance abuse. Children need to be protected from the influence of illegal drugs and substances.			
<i>Duty Bearer</i>	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
<i>Responsibilities and Action required</i>	<u>UN CRC Committee recommendations:</u> Effectively implement the Comprehensive Dangerous Drugs Act of 2002 Expand public education on drug abuse prevention	Support advocacy programs on prevention of drug and substance abuse	Provide children with a balanced family life and the appropriate standard of living for total development.	
<i>Capacity gap to undertake action required</i>	Limited resource devoted to the prevention of drug and substance abuse. Need to eliminate corruption in the police and anti-drug agencies.	Financial and human resources	Poverty (in situations where parents have to work abroad) and lack of time are the major obstacles to the ability of parents to exercise proper guidance to their children.	
<i>Pre-requisite</i>	Governance, fiscal and institutional reforms – particularly focusing on the police, NBI and the justice system.	Donor interest	Awareness of the dangers, dynamics and influence of drug and substance abuse	

Children's Right: ADMINISTRATION OF JUVENILE JUSTICE SYSTEM		<i>Child 0-5</i>	<i>Child 6-12</i>	<i>Child 13-18</i>
Indicative Impact of Migration and Remittances	<i>Impact on Life Cycle of Child</i>			
	As a result of the inadequacy of parental guidance, the number of children in conflict with the law as juvenile delinquents may increase			
Gaps of Rights (What they must receive?)	Children of temporary overseas workers should be provided guidance and care to prevent them from committing crimes. The absence of their parents should not be an excuse for them to be in conflict with the law.			
Duty Bearer	<i>Government</i>	<i>Media, NGOs, Research</i>	<i>Parents and Family</i>	
Responsibilities and Action required	<p>Organization into networks of the five pillars of justice system in some provinces to collectively work for the prevention and management of children victims of abuse</p> <p>Children's and women's desk established in police stations and at the National Bureau of Investigation</p> <p><u>UN CRC Committee recommendations:</u></p> <p>pass legislation on Comprehensive Juvenile Justice System and Delinquency Prevention Program</p> <p>raise the minimum age of criminal responsibility to an international level</p> <p>expand juvenile justice system</p>	Pursue active NGO advocacy on reforms in the juvenile justice system and on passage of legislation governing juvenile justice	Parents should ensure that they rear up their children in the right atmosphere and with proper guidance to prevent them from committing crime.	
Capacity gap to undertake action required	Limited resources devoted to the reforms needed in the justice system	Financial and human resources	Poverty (in situations where parents have to work abroad) and lack of time are the major obstacles to the ability of parents to exercise proper guidance to their children.	

			Awareness of the impact of the home environment on children's behavior.
Pre-requisite	Governance, fiscal and institutional reforms – particularly focusing on the police, NBI and the justice system.	Donor interest and continued support for reforms in the justice system	Education and access to information

Rights of Parents

<i>Right Holder</i>	Mothers who are temporary overseas workers	Fathers who are temporary overseas workers
<i>Rights</i>	<p>Right to bear children in the proper physical, psychological, emotional and spiritual environment</p> <p>Right to provide her daughters with an appropriate role model</p> <p>Right to provide her adolescent daughters with proper guidance as they go through their teen-age years</p>	<p>Right to be with his wife in her pregnancy to provide her with physical, psychological, emotional and spiritual support</p> <p>Right to provide his sons with an appropriate role model</p> <p>Right to provide his sons with proper guidance as they go through their teen-age years</p>
	<p>Right to be with their children to provide them guidance, care and proper example</p> <p>Right to communicate with their children regularly</p> <p>Right to provide for the physical, psychological, emotional, spiritual, mental and social needs of their children as father and mother and having joint common responsibilities as parents</p>	
<i>Indicative Impact of Migration and Remittances</i>	<p>Mothers who work abroad are unable to provide the motherly care and guidance that her children needs, particularly those who are very young</p> <p>Because of the pressure to earn a living, mothers leave very young children, some newly born, to surrogate mothers</p> <p>Pregnant women who continue to work abroad are exposed to tremendous risk and pressures, endangering the welfare of the child they are carrying</p> <p>Women are forced to take the so-called 3-D jobs (dirty, demeaning and dangerous)</p> <p>Women are vulnerable to physical and sexual abuse, maltreatment and violence in their work places</p>	Men suffer the emotional stress of being separated from their families
	<p>Separation of spouses has contributed to infidelity, marital quarrels and in many cases break-up</p> <p>Other children are born out of wedlock because of marital infidelity</p>	

Desired Impact of Remittances and Migration	<p>Mothers should be with their families to provide them care and guidance</p> <p>Working abroad must enhance the ability of mothers to take care of their children and perform her role</p> <p>Women should be protected in their workplace</p>	<p>Fathers should be with their family to provide them care, guidance and protection</p>	
	<p>Migration should involve the entire family and not separate children from their parents.</p> <p>Temporary overseas work must only be undertaken for short periods of time and only when children are older.</p>		
Duty Bearer	Government	NGOs, Academia, Media	Family
Action required (How?)	<p>Promote economic development to provide more employment and business opportunities locally</p> <p>Issue clear policy on migration and temporary overseas workers</p> <p>Protect the ability of parents to perform their socially ordained roles as fathers and mothers</p> <p>Mothers should not be allowed to leave when they have children below age 3.</p> <p>Both parents should not be allowed to work abroad for long periods of time when they have children below age 5</p>	<p>Involvement in the issues of migrants and their families</p> <p>Media discussion on the impact of migration on children, women, family, communities and society as a whole</p> <p>Promoting discussions that migration is not the solution to development problems in the Philippines; that it merely masks the underlying fiscal, governance and structural issues.</p>	<p>Protect the integrity of the family as the best environment in the rearing of children to enable them to attain their full development potential</p>
Capacity gap to undertake action required	<p>Political economy is controlled by oligarchs and political tribes</p> <p>Weak institutions</p>	<p>Awareness of the issues of migration and its impact on children, the family, communities and society</p>	<p>Economic means to provide for the children</p>
Pre-requisite	<p>Fiscal, institutional and governance reforms</p>	<p>Baseline data and research on the social impact of migration</p>	<p>Education and commitment to protect the integrity of the family</p>

7.2. Annex B: Tables and figures

Table 1: Number of Registered Filipino Emigrants by Major Occupational Group: 1981-2003

OCCUPATIONAL GROUPING	TOTAL	PERCENTAGE
A. EMPLOYED		
Professional, Technical and Related Workers	134,053	10.82%
Managerial, Executive, and Administrative Workers	13,667	1.10%
Clerical Workers	50,986	4.12%
Sales Workers	52,751	4.26%
Service Workers	30,808	2.49%
Agri, Animal Husbandry, Forestry Workers & Fisherman	28,661	2.31%
Production Process, Transport Equipment Operators & Laborers	49,645	4.01%
Members of the Armed Forces	4,443	0.36%
B. UNEMPLOYED		
Housewives	264,423	21.34%
Retirees	40,833	3.30%
Students	299,733	24.19%
Minors (Below 7 years old)	98,772	7.97%
Out of School Youth	2,939	0.24%
Refugees	3	0.00%
No Occupation Reported	167,217	13.50%
TOTAL	1,238,934	100.00%

Other Examples of Filipino Diaspora Giving

The Filipino American Medical Incorporated, a New York based group of doctors, from 199 to 2003, completed 124 major surgeries, provided free medical consultants to about 20,000 medical patients and shipped over USD2 million in medicine, surgical supplies and equipment.

The Carolina Medical Mission, a committee of the Philippine American Association of North Carolina, soliciting donations from fellow Filipinos and Americans, conducted medical missions in seven rural provinces from 2000 to 2002 and provided some USD 114,848.69 to various beneficiaries, excluding the value of various medical equipment.

The Filipino-American Community of South Puget Sound in Olympia, Washington State, channeled about USD216,000 through their Philippine counterpart, the Loving Presence Foundation, based in Bislig City, Surigao del Sur, to fund rehabilitation and livelihood programs of persons with disabilities in Bislig.

In the North American region, Feed the Hungry, Inc, had shipped over Php38 million to poor Filipinos in some 70 provinces nationwide, in the areas of school building, libraries, books, wells, and other infrastructure.

Hometown associations likewise have pooled their funds to renovate their hometown's auditorium, finance fiesta celebrations, build or renovate their churches, or provide scholarship grants to poor but deserving students in their hometowns.

Alumni associations, such as the UST Medical Alumni Association in the US provided over USD700,000 for medical research and faculty development for UST's Faculty of Medicine.

Possibly the most visible initiative is that of Gawad Kalinga, which builds houses jointly with beneficiaries in depressed communities in the Philippines. As of May 24, 2005, GK has reportedly sourced over Php25 million from overseas Filipino members of the Couples for Christ to build about 500 houses.

From: Ildfonso F. Bagasao, Jr., "Tapping Filipino Migrant Remittances for Local Economy and Development: Issues, Case Studies and Recommendations for Policy Consideration, a paper for presentation to the Ateneo Policy Center, October 11, 2005

Investments in children

Prior to the Asian financial crisis, a migrant's household back in the Philippines spent 5.4 percent of household income on education. A 25 percent improvement in exchange rates led to an increase in educational expenditures equivalent to 0.7 percent of household income.

Investments in children aged 10 to 17 also improved with positive exchange rate shocks, but in slightly different ways for boys and girls. The 25 percent exchange rate improvement led to a 3.3 percent increase in girls' school attendance and a 1.7 percent increase for boys, from base attendance rates of 95 percent and 93 percent, respectively.

Prior to the crisis, boys and girls aged 10 to 17 worked an average of 1.5 and 0.6 hours per week, respectively. A 25 percent exchange rate improvement decreased hours worked per week by 0.81 hours for boys, and by 0.54 hours for girls. Most of these declines in child labor were in unpaid work in a family farm or business.
